## GrazonNext® HL

EPA Reg. No. 62719-628

### 2(ee) Recommendation†

#### For Distribution and Use Only in the State of Texas

This product bulletin expires December 31, 2025, and must not be used or distributed after this date.

### Applications of GrazonNext HL Impregnated on Dry Fertilizer

#### ATTENTION

† This recommendation is made as permitted under FIFRA 2(ee) and has not been submitted to or approved by the EPA.

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- Read and follow all applicable directions for use, precautions and limitations on the product label attached to the container for GrazonNext HL herbicide.

#### Directions for Use

**IMPREGNATION:** The herbicide/fertilizer impregnation process must be done at commercial fertilizer or chemical dealerships that are properly equipped for this procedure.

**NOTE:** The practice of impregnating GrazonNext® HL herbicide on dry fertilizer is recommended only for dealers whose primary business is range and pasture. **The rates recommended to control the weed and brush species listed on the label were determined using foliar broadcast applications in water. Fertilizer impregnated with GrazonNext HL may or may not provide the same level of control as the foliar broadcast application.**

Maximum use rate of GrazonNext HL is 2.1 pints per acre per year. The target rate of GrazonNext HL should be impregnated on a minimum of 200 lbs of dry fertilizer per acre to insure sufficient dry fertilizer volume for adequate coverage when applied. It is recommended that a dye be added to the slurry to differentiate the impregnated fertilizer from none treated fertilizer. The addition of a surfactant or MSO is recommended to enhance the coverage on the fertilizer prills. The use of a drying agent is recommended when impregnating dry fertilizer with GrazonNext HL.

GrazonNext HL can be applied to and mixed with fertilizer undiluted unless volumes of fertilizer exceed 400 lbs per acre or the operator observes incomplete coverage. For higher fertilizer volumes, a slurry of 1 part GrazonNext HL with up to 5 parts water can be used to improve coverage of fertilizer prills. After the herbicide has been applied to the fertilizer, continuously mix the fertilizer in the mixer for as long as needed to ensure uniform prill coverage with GrazonNext HL. Continuous agitation (mechanical or recirculating) is needed to improve GrazonNext HL impregnation on dry fertilizer.

The delivery nozzle(s) must be placed inside the mixer and positioned to provide uniform spray coverage of the tumbling fertilizer. Use GrazonNext HL impregnated dry fertilizer as soon as possible after blending.

The mixing and application equipment must be dedicated for use only on grasslands.

**NOTE: It is the responsibility of the individual and/or company selling the fertilizer/herbicide mixture to follow all state regulations relating to dry bulk fertilizer blending, labeling and application."**

**APPLICATION:** Apply GrazonNext HL impregnated dry fertilizer during the normal fertilizer schedule for your grassland. When using fan spreaders, a 100% overlap is recommended. Fan spreaders should be calibrated to apply 1/2 the desired rate per acre. Application pattern should be overlapped to cover 1/2 of the previous swath. Nonuniform spreading of the herbicide-fertilizer mixture may result in unsatisfactory weed control or crop injury.

Follow applicable use directions, precautions, limitations on the EPA-registered labels for GrazonNext HL.

It is impossible to eliminate all risks associated with the use of this product. Crop injury, lack of performance, or other unintended consequences may result because of numerous factors including, but not limited to, use of the product contrary to label instructions (including, but not limited to, conditions noted on the label, such as unfavorable temperatures, soil conditions and other similar factors), abnormal conditions (such as excessive rainfall, drought, tornadoes, hurricanes and other similar conditions), presence of other materials, the manner of application, or other factors, all of which are beyond the control of Corteva Agriscience or the seller. To the extent permitted by law, all such risks shall be assumed by buyer.
