

Taegro[®] 2

fungicide

ACTIVE INGREDIENT

Bacillus subtilis var. *amyloliquefaciens* Strain FZB24* 13.0%

OTHER INGREDIENTS

Total 87.0%

Total 100.0%

% w/w

*Contains a minimum of 1.0×10^{10} colony forming units (CFU)/gram.

KEEP OUT OF REACH OF CHILDREN CAUTION

See inside this booklet for additional Precautionary Statements, First Aid, complete Directions for Use, and Warranty.

Precautionary statements

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION - Causes moderate eye irritation. Avoid contact with eyes, skin, or clothing. Wear protective eyewear such as goggles, face shield or shielded safety glasses. Harmful if absorbed through skin, inhaled or swallowed. Avoid breathing dust or spray mist. Wash thoroughly with soap and water after handling and before eating, drinking, and chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

Batch code and expiration date

[Batch code and expiration date to be inserted]

Novozymes Biologicals Inc.
5400 Corporate Circle
Salem, VA 24153, USA

Rethink Tomorrow

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Shoes
- Socks
- Waterproof gloves

Mixers/loaders and applicators must wear a dust/mist filtering respirator meeting NIOSH standards of at least N-95, R-95 or P-95. Repeated exposure to high concentrations of microbial proteins can cause allergic sensitization.

Follow the manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS

When handlers use closed systems or enclosed cabs in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

IMPORTANT: When reduced PPE is worn because a closed system is being used, handlers must be provided all PPE specified above for "applicators and other handlers" and have such PPE immediately available for use in an emergency, such as a spill or equipment break-down.

USER SAFETY RECOMMENDATIONS

Users should:

- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing

ENVIRONMENTAL HAZARDS

For terrestrial uses: Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark.

Do not contaminate water when cleaning equipment or disposing of equipment wash waters or rinsate.

PHYSICAL OR CHEMICAL HAZARDS

For spill, leak, fire, exposure, or accident call CHEMTREC at 1-800-424-9300.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the state or tribal agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 4 hours.

EXCEPTION: If the product is soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

For early entry into treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, wear:

- Coveralls worn over short-sleeved shirt and short pants
- Socks
- Shoes
- Waterproof gloves

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Keep unprotected persons out of treated areas until sprays have dried.

GENERAL

TAEGRO 2 is a bacterial based biofungicide/bactericide used for suppressing selected soil-borne and foliar diseases on agricultural and ornamental and other crops as listed on the following pages.

TAEGRO 2 is most effective in low to medium disease pressure situations and should be applied prior to disease or at disease establishment so suppression action is maximized.

MIXING INSTRUCTIONS

TAEGRO 2 must be pre-mixed thoroughly with water to assure a properly distributed suspension. The required amount of Taegro 2 should be added slowly into the spray tank during filling. With concentrate sprays, pre-mix the required amount of Taegro 2 in a clean container and add to the spray tank as it is being filled. Keep agitator running when filling spray tank and during spray operations. The addition of a non-ionic surfactant is recommended. If mix water pH is less than 5 or greater than 8, pH adjustment and buffering may improve suspension. Apply content of entire suspension within a few hours of mixing to ensure viability of TAEGRO 2.

COMPATIBILITY

TAEGRO 2 is compatible with many commonly used plant protection products and fertilizers, but has not been evaluated with all potential combinations of products that might be in tank mixes. To ensure compatibility, conduct a jar test by mixing proportionally scaled down quantities of the desired tank mix components in proportional amount of water. Add wettable powders first (the addition of a non-ionic surfactant is recommended at this point), followed by water dispersible granules, then by liquid flowables and lastly, emulsifiable concentrates. Mix thoroughly and let stand for at least five minutes. If the mix stays in solution or re-suspends, it is physically compatible. If possible, spray the jar mix on a small section of crop to confirm crop safety of the mix.

Observe the most restrictive of the labeling limitations and precautions of all products used in mixtures. Do not exceed label dosage rates. This product cannot be mixed with any product containing a label prohibition against such mixing. Test the combination on a small portion of the crop to be treated to ensure that a phyto-toxic response will not occur as a result of application.

APPLICATION INSTRUCTIONS

Apply TAEGRO 2 as early as possible in the life cycle of the plant to enhance disease protection. Apply TAEGRO 2 to plants according to use patterns by disease, crop and disease pressure as needed for up to 12 applications per season. For best results, initiate TAEGRO 2 applications prior to disease establishment while the disease pressure is low to medium. When diseases reach medium to high pressure, TAEGRO 2 is most effective in tank mixes or rotations with other fungicides and as an excellent resistance management tool.

FOLIAR APPLICATIONS: TAEGRO 2 should be applied in an application volume that provides adequate coverage and placement for optimum crop protection and disease prevention. Application rates of 2.6 to 5.2 oz per acre in 20-50 gallons per acre should be used for low biomass crops to provide optimum coverage. **Disease control applications for larger crop and soil drench applications that are made with the application rate per volume cannot exceed the total labeled application rate per area for that use pattern.** Higher spray volume will generally result in better coverage and better disease control. Lack of control when using below minimum spray volumes is solely at the risk of the applicator/user.

TRANSPLANTS, INCLUDING PLUGS: Apply TAEGRO 2 to transplants by dipping or drenching, making sure the root system is thoroughly soaked. For dipping, follow the instructions for "Cutting and Root Dips" before planting transplants into soil medium. For drenching, first plant the transplants into soil medium and then follow instructions for "Drenching." In greenhouse production apply TAEGRO 2 to newly sown transplants.

DRENCHING: Apply TAEGRO 2 to seedlings or newly rooted cuttings. Drench soil around plants with the TAEGRO 2 suspension making sure TAEGRO 2 is thoroughly drenched into the root zone.

Mix and apply TAEGRO 2 as follows:

- Per 100 gallons of water – By weight use 2.6 - 5.2 oz (75-150 grams) of TAEGRO 2; By volume, use 3.5-7.0 fluid ounces of TAEGRO 2
- Per 1 gallon of water – By weight use 0.05 oz (1.5 grams) of TAEGRO 2

CUTTING AND ROOT DIPS: Stir suspension for several minutes to ensure complete mixture and to eliminate clumps. Place rootstock in the suspension for five to ten minutes allowing time for TAEGRO 2 to penetrate the root zone. For ornamentals, apply at least one follow up drench treatment two to three weeks following initial treatment

Mix and apply TAEGRO 2 as follows:

- Per 1 gallon of water – By weight use 0.28 oz (8 grams) of TAEGRO 2; By volume, use 2 teaspoons of TAEGRO 2

SOIL INCORPORATION: Mix TAEGRO 2 into soil or soilless growing media at a rate of 8.8 oz. (250 grams) per cubic yard. Thoroughly mix media, using mechanical mixing equipment, to ensure a uniform distribution of product. Incorporated into soil, TAEGRO 2 can be raked into growing beds prior to planting.

HYDROPONICS: Prepare a stock solution by adding 1 gram (¼ teaspoon) of TAEGRO 2, for every 50 feet of irrigation tubing, in one gallon of water. Stir product for several minutes to ensure complete suspension. Add solution to circulating water system and allow to go through three to five watering cycles before clearing the system. For best results, make two or three applications spaced one week apart.

INTERIORSCAPES: Before application, thoroughly moisten root zone with water. Mix 1 gram of TAEGRO 2 per 1 liter of water (or ¼ teaspoon of TAEGRO 2 per gallon of water). Stir solution for several minutes to ensure complete suspension. Drench solution onto root zone to ensure coverage to all roots. TAEGRO 2 performs best when applied to seedlings or young plants. For best results, make two or three applications spaced one week apart.

ORCHIDS AND FERNS: For potted orchids and ferns, follow directions for drenching. For orchids and ferns with exposed roots, prepare 4 grams of TAEGR0 2 in 1 liter of water (or 3 teaspoons of TAEGR0 2 per gallon of water.) Pour solution into spray container (or squirt bottle) and spray roots to point of drip. TAEGR0 2 performs best when applied to seedlings or young plants. For best results, make two or three applications spaced one week apart.

TUBERS, BULBS AND CORMS: Mix 4 grams of TAEGR0 2 in 1 liter of water (or 3 teaspoons of TAEGR0 2 per gallon of water). Stir solution for several minutes to ensure complete suspension. Dip tubers (or bulbs, etc.) for 10 to 30 minutes before planting. For best results, make two or three applications spaced one week apart.

CHEMIGATION

General Requirements

Apply this product through overhead sprinkler irrigation systems including center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set, or hand move; flood (basin); furrow; border or drip (buried or surface placed) irrigation systems. Do not apply this product through any other type of irrigation system.

Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.

A good source for answers if you have questions about calibration is your local State Cooperative Extension Service specialists, equipment manufacturers or university calibration guides.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

General Instructions for Use of TAEGR0 2 in Chemigation Mixing and Application Instructions: A pesticide supply tank is recommended. Fill supply tank with water to approximately one-half of the desired volume and add TAEGR0 2, mixing while pouring in TAEGR0 2. Fill the supply tank to the desired volume. Continuous agitation of TAEGR0 2 in the supply tank is required to achieve optimum coverage and crop protection.

Mix 2.6 – 5.2 oz (75-150 grams) of TAEGR0 2 per 20-100 gallons of water in a chemigation nurse tank. Agitation is required in the nurse tank to maintain adequate suspension of TAEGR0 2 during application. Mechanical agitation is preferred for larger nurse or reservoir tanks that require longer periods of time for application to larger areas or for more concentrated tanks using lower volumes of water. For foliar diseases, apply no more than 0.1 – 0.25 inches of water per acre as excess chemigation may decrease efficacy. If target disease is in the soil, use 0.25 – 0.5 inches of water per acre in order to move product into the soil profile, but additional irrigation volumes may be required for

optimum coverage depending on soil texture and soil moisture levels at the time of application.

Compatibility: TAEGR0 2 is compatible with many commonly used plant protection products and fertilizers, but has not been evaluated with all potential combinations of products. If TAEGR0 2 is applied in combination with other pesticides, determine compatibility prior to application through the irrigation system. To ensure compatibility, conduct a jar test by mixing proportionally scaled down quantities of the desired irrigation components in proportional amount of water. Add wettable powders first (the addition of a non-ionic surfactant is recommended at this point), followed by water dispersible granules, then by liquid flowables and lastly, emulsifiable concentrates. Mix thoroughly and let stand for at least ten (10) minutes. If the mix stays in solution or re-suspends, it is physically compatible. If possible, spray the jar mix on a small section of crop to confirm crop safety of the mix. Observe the most restrictive of the labeling limitations and precautions of all products used in mixtures. Do not exceed label dosage rates. This product cannot be mixed with any product containing a label prohibition against such mixing. Test the combination on a small portion of the crop to be treated to ensure that a phyto-toxic response will not occur as a result of application.

Requirements for Chemigation Systems Connected to Public Water Systems

1. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regular serves an average of at least 25 individuals daily at least 60 days out of the year.
2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone (RPZ), back flow preventer or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the flow outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.
3. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection.
4. The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

5. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Do not apply when wind speed favors drift beyond the area intended for treatment.

Requirements for Sprinkler Chemigation

1. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow.
2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

7. Do not apply when wind speed favors drift beyond the area intended for treatment.

Requirements for Flood (Basin), Furrow and Border Chemigation

1. Systems using a gravity flow pesticide dispensing system must meter the pesticide into the water at the head of the field and downstream of a hydraulic discontinuity such as a drop structure or weir box to decrease potential for water source contamination from back flow if water flow stops.
2. Systems utilizing a pressurized water and pesticide injection system must meet the following requirements:

- a. The system must contain a functional check valve, vacuum relief valve,

and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow.

- b. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
- c. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- d. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
- e. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
- f. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Requirements for Drip (Trickle) Chemigation

1. The system must contain a functional check valve, vacuum relief valve and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow.
2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional inter-locking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

USE RECOMMENDATIONS:

Crop	Diseases	Rate (Oz/Acre)	Use Recommendations
Leafy Vegetables: (Crop Group 4) Head/Leaf Lettuce Celery Spinach Radicchio Endive Arugula Parsley Rhubarb	For soil-borne disease suppression of: Rhizoctonia Fusarium Sclerotinia	2.6 - 5.2 oz	<ul style="list-style-type: none"> • For <u>Rhizoctonia</u> and <u>Fusarium</u> control, apply at planting (seeded or transplanted) or immediately following through overhead sprinkler, drip injection (surface or buried), in furrow soil spray or with liquid fertilizer at planting. • For sequential applications using overheads, sprinkler, basal sprays or drip injection apply every 7-14 days as needed through the season. When using basal spray incorporate by following with irrigation to soak root zone. • For <u>Sclerotinia</u>, the first application should be made at planting applied in-furrow or through drip irrigation (buried or surface) to make sure the application to the root zone. Sequential applications should initiate at lettuce thinning and continuing every 7-14 days depending on disease pressure. • For optimum control of <i>S. minor</i>, Taegro 2 should be applied to the root zone • A combination of applications for <i>S. sclerotiorum</i> control should be drip, soil surface applications and foliar applications at infestation sites (dead or dying tissue) for optimum control. • Fields with historical disease problems may require a higher rate, more applications, and shorter application intervals for better efficacy.
Swiss Chard and other leafy vegetables	For foliar suppression of: Downy Mildew Powdery Mildew	2.6 - 5.2 oz	<ul style="list-style-type: none"> • Start applications prior to disease or at disease establishment. Apply every 7-14 days alone, or in rotation, or tank mix with other registered fungicides. • Apply enough spray solution for thorough coverage. • The addition of a non-ionic surfactant may improve disease control.
<p>Crops in Leafy Vegetables (Crop Group 4): Amaranth (Chinese spinach); arugula (rocket); cardoon; celery; celery, Chinese; celtuce; chervil; chrysanthemum, edible-leaved; chrysanthemum, garland; corn salad; cress, garden; cress, upland; dandelion; dock (sorrel); endive (escarole); fennel, Florence; lettuce, head and leaf; orach; parsley; purslane, garden; purslane, winter; radicchio (red chicory); rhubarb; spinach; spinach, New Zealand; spinach, vine; Swiss chard; cultivars, varieties and/or hybrids of these.</p>			

Crop	Diseases	Rate (Oz/Acre)	Use Recommendations
Fruiting Vegetables: (Crop Group 8) Tomato Peppers and other fruiting vegetables	Seedling diseases caused by: Rhizoctonia Fusarium Phytophthora Pythium	2.6 - 5.2 oz	<ul style="list-style-type: none"> • For soil disease control applications, apply as drench on transplants prior to planting. • Apply w/liquid fertilizer or as an in furrow soil spray or drip irrigation injection (surface or buried) at or immediately following planting. • Follow with drip injection or basal sprays every 7-14 days as needed through the season. When using basal spray incorporate by following with irrigation to soak root zone. • Fields with historical <u>Rhizoctonia</u>, <u>Fusarium</u>, <u>Phytophthora</u> and <u>Pythium</u> problems may require more applications and shorter frequency for better efficacy.
	For foliar suppression of: Powdery Mildew Early Blight Late Blight Bacterial Speck – (<i>Pseudomonas</i> spp) Bacterial Spot – (<i>Xanthomonas</i> spp.)	2.6 - 5.2 oz	<ul style="list-style-type: none"> • Start foliar disease control applications prior to disease or at disease establishment. Apply every 7-14 days alone, or in rotation, or tank mix with other registered fungicides. Established or heavier disease pressure may require switching to rotations with or to chemical fungicides. • Apply enough spray solution for thorough coverage. • The addition of a non-ionic surfactant may improve disease control.
Crops in Fruiting Vegetables (Crop Group 8): African eggplant; bush tomato; bell pepper; cocona; currant tomato; eggplant; garden huckleberry; goji berry; groundcherry; martynia; naranjilla; okra; pea eggplant; pepino; pepper, bell; pepper, nonbell; roselle; scarlet eggplant; sunberry; tomatillo; tomato; tree tomato; cultivars, varieties, and/or hybrids of these.			

Crop	Diseases	Rate (Oz/Acre)	Use Recommendations
Cucurbits: (Crop Group 9) Cantaloupe Honey Dew Cucumber Squash Watermelon and other cucurbits	Seeding diseases caused by: Rhizoctonia Fusarium Phytophthora Pythium	2.6 - 5.2 oz	<ul style="list-style-type: none"> • For soil disease control, apply as drench on transplants prior to planting. • Apply at planting or immediately following planting as an in furrow soil spray, drip irrigation (buried or surface) or with liquid fertilizer. • Follow with drip irrigation or basal sprays every 7-14 days as needed through the season. When using basal spray incorporate by following with irrigation to soak root zone. • Fields with historical <u>Rhizoctonia</u>, <u>Fusarium</u>, <u>Phytophthora</u> and <u>Pythium</u> problems may require more applications and shorter frequency for better efficacy. • Established or heavier disease pressure may require switching to rotations with or to chemical fungicides.
	For foliar suppression of: Powdery Mildew	2.6 - 5.2 oz	<ul style="list-style-type: none"> • For foliar disease control, start applications prior to disease or at disease establishment. Apply every 7-14 days alone, or in rotation, or tank mix with other registered fungicides. Established or heavier disease pressure may require switching to rotations with or to chemical fungicides.
Crops in Cucurbits (Crop Group 9): Chayote (fruit); Chinese waxgourd (Chinese preserving melon); citron melon; cucumber; gherkin; gourd, edible (includes hyotan, cucuzza, hechima, Chinese okra); Momordica spp (includes balsam apple, balsam pear, bittermelon, Chinese cucumber); muskmelon (includes cantaloupe); pumpkin; squash, summer; squash, winter (includes butternut squash, calabaza, hubbard squash, acorn squash, spaghetti squash); watermelon; cultivars, varieties and/or hybrids of these.			
Ornamentals:	Rhizoctonia Fusarium Phytophthora Pythium	2.6 - 5.2 oz	<ul style="list-style-type: none"> • Apply enough solution to thoroughly soak the root zone in growing media. • Start applications prior to disease or at disease establishment. Apply every 7-14 days alone, or in rotation, or tank mix with other registered fungicides.

Crop	Disease	Rate (Oz/Acre)	Use Recommendations
Root and Tuber Vegetables: (Crop Groups 1 and 2) (and includes foliar of Root and Tuber Vegetables) Carrots Potatoes Sweet Potatoes Yams Radish Sugarbeets and other root and tuber vegetables	For suppression of seedling and tuber diseases: Rhizoctonia Phytophthora Pythium	2.6 - 5.2 oz	<ul style="list-style-type: none"> • For soil disease control, apply at planting as an in-furrow soil spray, drip irrigation (surface or buried) or with liquid fertilizer at planting. • Follow with applications every 7-14 days with drip chemigation or post-directed sprays. • For best placement to the soil area, apply via chemigation every 7-14 days until row closure. • If applications made via post-directed sprays, following with irrigation to soak root zone. • Fields with historical problems may require more applications and shorter frequency for better efficacy. • Established or heavier disease pressure may require switching to rotations with or to chemical fungicides.
	For foliar suppression of: Late Blight	2.6 - 5.2 oz	<ul style="list-style-type: none"> • For foliar disease control, start applications prior to disease or at disease establishment. Apply every 7-14 days alone, or in rotation, or tank mix with other registered fungicides. • Established or heavier disease pressure may require switching to rotations with or to chemical fungicides.
Root and Tuber Vegetables (Crop Groups 1 and 2): Arracacha; arrowroot; artichoke, Chinese; artichoke, Jerusalem; beet, garden; beet, sugar; burdock, edible; canna, edible; carrot; cassava, bitter and sweet; celeriac; chayote (root); chervil, turnip-rooted; chicory; chufa; dasheen (taro); ginger; ginseng; horseradish; leren; parsley, turnip-rooted; parsnip; potato; radish; radish, oriental; rutabaga; salsify; salsify, black; salsify, Spanish; skirret; sweet potato; tanier; turmeric; turnip; yam bean; yam, true.			

Berry and small fruit: (Crop Group 13) Grapes Berries, cane Berries, bush Strawberries and other berries and small fruit	For suppression of seedling and crown diseases: Rhizoctonia Phytophthora Pythium Verticillium	2.6 - 5.2 oz	<ul style="list-style-type: none"> • For soil disease control, apply as a drench on transplants prior to planting. • For seedling diseases, apply at planting as an in-furrow spray or with liquid fertilizer or immediately following planting through drip irrigation (buried or surface) or as a basal spray. • Follow with drip irrigation or basal sprays every 7-14 days as needed through the season. When using basal spray incorporate by following with irrigation to soak root zone. • Fields with historical <u>Rhizoctonia</u>, and <u>Pythium</u> problems may require more applications and shorter frequency for better efficacy. • Established or heavier disease pressure may require switching to rotations with or to chemical fungicides.
	For foliar suppression of: Powdery mildew Botrytis	2.6 - 5.2 oz	<ul style="list-style-type: none"> • For foliar disease control, start applications prior to disease or at disease establishment. Apply every 7-14 days alone, or in rotation, or tank mix with other registered fungicides • Established or heavier disease pressure may require switching to rotations with or to chemical fungicides.
<p>Berry and small fruits (Crop Group 13): Amur river grape; aronia berry; bayberry; bearberry; bilberry; blackberry (including Andean blackberry, arctic blackberry, bingleberry, black satin berry, boysenberry, brombeere, California blackberry, Chesterberry, Cherokee blackberry, Cheyenne blackberry, common blackberry, coryberry, darrowberry, dewberry, Dirksen thornless berry, evergreen blackberry, Himalayaberry, hullberry, lavacaberry, loganberry, lowberry, Lucretiaberry, mammoth blackberry, marionberry, mora, mures deronce, nectarberry, Northern dewberry, olallieberry, Orgeon evergreen berry, phenomenalberry, rangeberry, ravenberry, rossberry, Shawnee blackberry, Southern dewberry, tayberry, youngberry, zarzamora, and cultivars, varieties and/or hybrids of these); blueberry, highbush; blueberry, lowbush; buffalo currant; buffaloberry; che; Chilean guava; chokecherry; cloudberry; cranberry; cranberry, highbush; currant, black; currant, red; elderberry; European barberry; gooseberry; grape; honeysuckle, edible; huckleberry; jostaberry; Juneberry (Saskatoon berry); kiwifruit, fuzzy; kiwifruit, hardy; lingonberry; maypop; mountain pepper berries; mulberry; muntries; native currant; partridgeberry; phalsa; pincherry; rasperry, black and red; riberry; salal; schisandra berry; sea buckthorn; serviceberry; strawberry; wild raspberry; cultivars, varieties, and/or hybrids of these.</p>			

Seed Beds and Seedling Plants: Apply TAEGR0 2 to seed beds, seedlings or newly rooted cuttings. Drench soil with the TAEGR0 2 suspension making sure TAEGR0 2 is thoroughly drenched around the seed or into the root zone.

Mix and Apply TAEGR0 2 as follows:

- Per 100 gallons of water – [By weight] use 2.6 - 5.2 oz (75-150 grams) of TAEGR0 2; [By volume,] use 3.5-7.0 fluid ounces of TAEGR0 2.
- Per 1 gallon of water – [By weight] use 0.05 oz (1.5 grams) of TAEGR0 2.

WARRANTY: The Directions for Use of this product reflect the opinion of experts based on field use and tests. The directions are believed to be reliable and must be followed carefully. Novozymes Biologicals warrants that at the time of the first sale of this product it conforms to the chemical description on the label and when used according to the label directions under normal growing conditions is reasonably fit for the purposes referred to above. Buyers/Users of this product assume full risk for any use contrary to the specified directions. If this product does not perform as warranted above and to the extent consistent with applicable law, customer's sole remedy for breach of warranty shall be replacement of the product or refund of the purchase price paid, at the option of Novozymes Biologicals. EXCEPT AS PROVIDED ELSEWHERE IN WRITING CONTAINING AN EXPRESS REFERENCE TO THIS WARRANTY AND LIMITATION OF DAMAGES, SELLER MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OR GUARANTEE TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, INCLUDING ANY OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS OR OF MERCHANTABILITY, AND NO AGENT OF SELLER IS AUTHORIZED TO DO SO.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE

TAEGR0 2 consists of living microbes. Store product at temperatures below 95°F (35°C) and use before the expiration date. Do not freeze. Close opened packages tightly.

PESTICIDE DISPOSAL

To avoid wastes, use all material in this container by application according to label directions. If wastes cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program (often such programs are run by state or local governments or by industry).

CONTAINER DISPOSAL

Nonrefillable container. Do not reuse or refill this container. Completely empty bag into application equipment by shaking and tapping sides and bottom to loosen clinging particles. Then offer for recycling if available, or dispose of empty bag in a sanitary landfill or by incineration. Do not burn unless allowed by state and local ordinances.
