APPLICATION INSTRUCTIONS

Use 30 grams per acre. Multiple applications work best. Best response results where FT UNIVERSAL MICROBES™ is concentrated in the root zone through drip irrigation, or soil injection. Can also be applied aerial, ground and foliar with beneficial results.

Compatibility Test for Tank Mix Components:

Fresh Tracks Ag LLC does not assume responsibility for unexpected results when tank mixing with FT UNIVERSAL MICROBES™, conduct a jar test before mixing to ensure compatibility of FT UNIVERSAL MICROBES™ with other fertigation, or fertilizers if the tank mix combination has not been used previously. In addition, apply the mixture to a small area or small number of plants prior to large-scale treatments to ensure that the mixture does not result in phytotoxicity.

To test for compatibility, in a small jar, mix a small amount (16 to 32 ounces) of spray combining all tank mix ingredients in the same ratio as the anticipated use. If any indications of physical incompatibility develop, do not use this mixture for spraying. These indications usually appear within 5 to 15 minutes after mixing and include observations such as development of precipitate or surface oil or thick (clabbered) texture. Do not use any spray solution that could clog spray nozzles. Follow the most restrictive of all precautions and limitations on this label and labels of other fertigation products used in the tank mixture with FT UNIVERSAL MICROBES™.
