FirstRate*

EPA Reg. No. 62719-275

2(ee) Recommendation[†]

For Distribution and Use only in the State of Michigan

Reduced Rate of FirstRate Burndown or Preemergence Followed by Roundup ULTRA

ATTENTION

- [†]This recommendation is made as permitted under FIFRA 2(ee) and has not been submitted to or approved by the EPA or state lead pesticide agency.
- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This product bulletin must be in the possession of the user at the time of application.
- Read the label affixed to the container for FirstRate before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of FirstRate according to this product bulletin is subject to all use precautions and limitations imposed by the label affixed to the container for FirstRate.

Directions for Use

FirstRate* herbicide can be applied as a burndown or preemergence soil application at a reduced rate to provide foundation broadleaf weed control when followed by a postemergence application of Roundup ULTRA in Roundup Ready soybeans.

Broadcast application rates:

Product	Timing	Application Rate
FirstRate + 2,4-D [†] + COC [†]	Burndown or Preemergence	0.3 oz/acre + 1pt/acre + 1 gal/100 gal
Roundup ULTRA	Post	1.5 - 2.0 pt/acre

[†]If no broadleaf weeds are present at burndown, 2,4-D and COC are not needed.
If grasses are present at burndown application, a post graminicide should be added to the tank mix.

Always read and follow label recommendations, including applicable use directions, precautions and limitations of all products, whether used alone or in a tank mix. When tank mixing, follow the most restrictive limitations on the label of each product used. Tank mix applications can result in increased crop injury as compared to either product used alone.
