

HARASS™
herbicide

**PLUS GLYPHOSATE (TANK MIXTURE) FOR WEED CONTROL IN STS X
ROUNDUP READY STACKED TRAIT SOYBEANS**

GENERAL INFORMATION

HARASS herbicide is a dry flowable formulation that selectively controls certain broadleaf weeds in soybeans.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

HARASS at up to 0.33 oz per acre may be tank mixed with glyphosate for control of certain broadleaf weeds in STS X Roundup Ready stacked trait soybeans. For tank mixtures of HARASS plus glyphosate herbicide, always read and follow all use directions, restrictions, and precautions on the EPA approved labeling. When tank mixing, the most restrictive labeling applies. The tank mixture of HARASS plus glyphosate is recommended for use only on soybeans designated "STS® X Roundup Ready stacked trait". Severe injury or death of soybeans will result if any soybeans not designated as "STS® X Roundup Ready stacked trait" are treated with this tank mixture.

Application Information

Timing to Crop

The HARASS plus glyphosate tank mix may be applied to "STS® X Roundup Ready stacked trait" soybeans anytime after the first trifoliolate has expanded fully and up until 60 days before soybeans are harvested.

Rate of Application and Weed Size

For improved control of common lambsquarters, volunteer Roundup Ready canola, ALS-sensitive horseweed and kochia, and/or wild buckwheat, tank mix up to 0.33 oz HARASS per acre with a recommended rate of glyphosate. Refer to the

HARASS and glyphosate manufacturer's labels and technical bulletins for other weeds which may be controlled or suppressed, and the maximum weed size at application. For best results, apply to small, actively growing weeds.

Do not apply more than 0.33 oz HARASS per acre per growing season.

Adjuvants

When tank mixing HARASS with glyphosate, the addition of ammonium sulfate (AMS) at 4.25 – 17 lb per 100 gal of spray mixture is recommended. Refer to the glyphosate manufacturer's label for specific ammonium nitrogen recommendations. When velvetleaf is present, the addition of ammonium sulfate is required at a minimum rate of 2 lb per acre.

The addition of surfactant at 0.125 – 0.25% v/v (1-2 pt per 100 gal spray mixture) to HARASS plus glyphosate tank mixes will improve weed control when glyphosate products are used that do not contain built-in adjuvant systems. Glyphosate products differ in their adjuvant contents. Glyphosate products such as Glyfos or Roundup Original allow the addition of surfactants. Refer to the glyphosate product label for the manufacturer's specific surfactant recommendation.

**IMPORTANT
BEFORE USING HARASS HERBICIDE, READ
AND FOLLOW ALL APPLICABLE
DIRECTIONS, RESTRICTIONS, AND
PRECAUTIONS ON THE EPA-REGISTERED
LABELS.**

This labeling must be in the possession of the user at the time of pesticide application.

This bulletin contains new or supplemental instructions for use of this product which do not appear on the EPA-registered package label. Follow the instructions carefully.

Read the Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies on the Section 3 Federal product label before buying or using THIS product. If terms are not acceptable, return the unopened package at once to Seller for full refund of purchase price paid. Otherwise, use by Buyer or any other User constitutes acceptance of the terms of the Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies on the Section 3 Federal product label.
