RESTRICTED USE PESTICIDE

Due to Ground and Surface Water Concerns

For retail sale to and use only by Certified Applicators, or persons under their direct supervision, and only for those uses covered by the Certified Applicator's certification.

This product is a restricted use herbicide due to ground and surface water concerns. Users must read and follow all precautionary statements and instructions for use in order to minimize potential for atrazine to reach ground and surface water.

Volley® Atz Corn Herbicide

EPA Reg. No. 55467-7

Weed Control in Sweet Corn

ATTENTION

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This label must be in the possession of the user at the time of pesticide application.
- Read the label affixed to the container for **Volley® Atz Corn Herbicide** before applying. Follow all applicable use directions and precautions on the EPA-registered label.
- Use of **Volley Atz** according to this supplemental labeling is subject to all restrictions and limitations imposed by the label affixed to the product container.

Directions for Use

Volley Atz Applied Alone

Used alone, **Volley® Atz Corn Herbicide** may be applied to sweet corn using rates stated in the product label for **Volley Atz** and application methods and timing listed below.

Carriers and Spray Volume: Either water or liquid fertilizers such as solutions, slurries or suspensions may be used as liquid carriers. Refer to product label for **Volley Atz** for details.

Application Timing and Methods: For the optimum period of effective weed control during the time most critical to corn production, preplant applications of **Volley Atz** should occur as close as possible to planting. Preemergence applications should occur as close as possible to planting, but prior to weed emergence. Refer to product label for **Volley Atz** for details.

Note: Do not apply **Volley Atz** to sweet corn as an early postemergence application.

- **Early Preplant:** On medium and fine textured soils (see Table 1 in main label), **Volley Atz** may be applied up to 30 days prior to planting.
- **Preplant Incorporation:** **Volley Atz** and certain tank mixes may be mechanically incorporated in the top 2 inches of the soil with field cultivators, discs, or spring tooth harrows at any time within 14 days prior to planting.
- **Preemergence Surface:** **Volley Atz** and certain tank mixes may be applied to the soil surface as a broadcast or banded application.

- **Postplant-Preemergence: Volley Atz** may be applied immediately after planting but prior to corn emergence.
- **Banding Preemergence: Volley Atz** may be applied in a 10 to 14 inch band after corn planting but prior to corn emergence.

Sprinkler Irrigation: Do not apply Volley Atz by sprinkler irrigation. Use a sprinkler system only to incorporate **Volley Atz** after application. Refer to product label for **Volley Atz** for details.

Cultivation: Cultivation should be delayed as long as possible. If weeds develop, a shallow cultivation or rotary hoeing will generally result in improved weed control. Refer to product label for **Volley Atz** for details.

Soil Texture and Organic Matter: The use rate of **Volley Atz** is determined by a combination of two factors, soil texture and organic matter, which must be determined prior to application. Refer to Table 1 in main product label for soil texture classifications.

Use Rates for Conventional Tillage Systems: Refer to table 2 in main label for application rates and detailed information for conventional systems.

Use Rates for Reduced Tillage Systems: Refer to table 3 in main label for application rates and detailed information for reduced tillage systems.

Weeds Controlled: Refer to table 4 in main label for details.

Volley Atz Applied in Tank Mix Combination

Additional weeds may be controlled with tank mixes of **Volley Atz** and other products labeled for use on sweet corn. Tank mix combinations may be used in conventional, reduced, or no-till systems and may be applied using application methods and timing listed above unless otherwise specified in the tank mix product label. Refer to the product label for **Volley Atz** for details on carriers, mixing instructions and testing for compatibility of tank mixtures.
