### GENERAL INFORMATION ABOUT CIDETRAK® D

CIDETRAK® D is a gustatory stimulant with no insecticidal properties of its own. This stimulant relies on the compulsive feeding behavior by adult corn rootworms and cucumber beetles (*Diabrotica* spp.) on cucurbit bitters, a natural component of buffalo gourd. When mixed with a stomach poison insecticide, CIDETRAK D stimulates beetles to ingest the insecticide, providing greater efficacy of the insecticide. CIDETRAK D is formulated to mix with a number of insecticides and to adhere to plant surfaces.

### DIRECTIONS FOR USE

**MIXING DIRECTIONS:** Fill the mixing tank with one-half desired amount of water. With the agitation system operating, add insecticide and after thorough suspension add the recommended amount of CIDETRAK® D. Once the mixture is thoroughly suspended, add the remainder of the water, maintaining constant agitation. Continue to provide agitation during mixing and application.

**APPLICATION DIRECTIONS:** CIDETRAK® D applications are bait treatments that requires large discrete droplets rather than a full cover spray: A volume median diameter (VMD) droplet size of 600 µm is recommended. See technical brochure information about how best to achieve this by air and by ground. All screens should be removed from the spray systems, including nozzle and strainer screens, or use screens larger than 6 mesh.

Crop	REMARKS
Corn	<b>AIR:</b> Mix and apply 3.1 oz (87 g) of CIDETRAK® D in 1-5 gal. of water per acre.
	<b>GROUND:</b> Mix and apply 3.1 oz (87 g) of CIDETRAK D in 5-10 gal. of water per acre.
