For broad-spectrum, postemergence selective control of annual and perennial grass weeds in select crops and other use sites

Active Ingredient:
sethoxydim: 2-[1-(ethoxyimino)butyl]-5-[2-(ethylthio)propyl]-3-hydroxy-2-cyclohexen-1-one* ........................................ 18.0%

Other Ingredients: ................................................. 82.0%

Total: ............................................................. 100.0%

* Equivalent to 1.5 pounds of sethoxydim per gallon formulated as an emulsifiable concentrate
Contains petroleum distillate

KEEP OUT OF REACH OF CHILDREN
WARNING/AVISO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

See inside for complete First Aid, Precautionary Statements, Directions For Use, Conditions of Sale and Warranty, and state-specific crop and/or use site restrictions.

In case of an emergency endangering life or property involving this product, call day or night 1-800-832-HELP (4357).

Precautionary Statements

Hazards to Humans and Domestic Animals

WARNING. Causes substantial but temporary eye injury. Causes skin irritation. Harmful if absorbed through skin or swallowed. DO NOT get in eyes, on skin, or on clothing.

Personal Protective Equipment (PPE)

Applicators and other handlers must wear:

- Coveralls over short-sleeved shirt and short pants
- Chemical-resistant gloves, made of barrier laminate, nitrile rubber ≥ 14 mils, butyl rubber ≥ 14 mils, or viton ≥ 14 mils
- Chemical-resistant footwear plus socks
- Protective eyewear
- Chemical-resistant headgear for overhead exposure
- Chemical-resistant apron when cleaning equipment, mixing, and loading

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. DO NOT reuse them. Follow manufacturer’s instructions for cleaning and maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering Controls Statement

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

Environmental Hazards

This product is toxic to aquatic organisms. For terrestrial uses, DO NOT apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. DO NOT contaminate water when disposing of equipment washwater or rinsate.

Endangered Species Concerns

NOTE: The use of any pesticide in a manner that may kill or otherwise harm an endangered species or adversely modify their habitat is a violation of federal law. This pesticide is toxic to vascular plants and should be used strictly in accordance with drift precautions on this label to minimize off-site exposures.

Physical and Chemical Hazards

COMBUSTIBLE. DO NOT use or store near heat or open flame.

USER SAFETY RECOMMENDATIONS

Users should:

- Wash hands thoroughly after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.
Directions For Use

It is a violation of federal law to use this product in a manner inconsistent with its labeling. This label must be in possession of the user at the time of herbicide application.

**DO NOT** apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

Observe all precautions and limitations in this label and the labels of products used in combination with Poast® herbicide. Use of Poast not consistent with this label can result in injury to crops, animals, or persons.

### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

**DO NOT** enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls over short-sleeved shirt and short pants
- Chemical-resistant gloves, made of barrier laminate, nitrile rubber ≥ 14 mils, butyl rubber ≥ 14 mils, or viton ≥ 14 mils
- Chemical-resistant footwear plus socks
- Protective eyewear
- Chemical-resistant headgear for overhead exposure

### NONAGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

**DO NOT** enter or allow others to enter treated areas until sprays have dried.

### STORAGE AND DISPOSAL

**DO NOT** contaminate water, food, or feed by storage or disposal.

**Pesticide Storage**

**DO NOT** allow this product to freeze. **DO NOT** store below 32° F or above 100° F. Store in original container only, in a dry place away from heat or open flame, and separate from feed or foodstuffs.

**Pesticide Disposal**

To avoid pesticide waste, use all material in this container by application according to label directions. If pesticide waste cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program (often such programs are run by state or local governments or by industry).

**Container Handling**

**Nonrefillable Container. DO NOT** reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying; then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.

**Triple rinse containers small enough to shake (capacity ≤ 5 gallons) as follows:** Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

**Triple rinse containers too large to shake (capacity > 5 gallons) as follows:** Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Repeat this procedure two more times.

**Pressure rinse as follows:** Empty the remaining contents into application equipment or mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank, or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

(continued)
### In Case of Emergency

In case of a spill of this product, call:

- CHEMTREC 1-800-424-9300
- BASF Corporation 1-800-832-HELP (4357)

#### Steps to take if this material is released into the environment or spilled:

- Wear Personal Protective Equipment (PPE) and avoid exposure when managing a spill. (See Precautionary Statements section of this label for required PPE.)
- Dike and contain the spill with inert, absorbent material (e.g., sand, earth) and transfer liquid and solid diking material to separate containers for disposal. Small-scale spills of Poast® herbicide (that can be cleaned up with a typical spill kit) may be applied to labeled sites.
- Remove contaminated clothing, and wash affected skin areas with soap and water. Wash clothing before reuse.
- Keep spill out of all sewers and open bodies of water.

### Restrictions

- **Maximum seasonal application rate** - Refer to the Use-specific Information section of the label.
- **Preharvest interval (PHI)** - Refer to the Use-specific Information section of the label.
- **DO NOT** apply preplant or preemergence before planting grass crops except field corn. Refer to Use-specific Information.
- **DO NOT** plant harvestable crops for 30 days after application unless sethoxydim is labeled for use on that crop.
- Avoid all direct or indirect contact with any desired grass crop (e.g., corn, rice, small grains, sorghum, and ornamental grasses and turfgrass).
- **Stress** - **DO NOT** apply to grass weeds or crops under stress because of lack of moisture, hail damage, flooding, herbicide injury, mechanical injury, or widely fluctuating temperatures. Unsatisfactory control may result. In irrigated areas, it may be necessary to irrigate before application to ensure active grass weed growth.
- **DO NOT** apply to crops that show injury (leaf phytotoxicity or plant stunting) produced by any other prior herbicide applications because this injury may be enhanced or prolonged with new or additional herbicide application.
- A minimum of 14 days is required between sequential applications of Poast.
- **DO NOT** use selective application equipment such as recirculating sprayers, wiper applicators, or shielded applicators.
- **DO NOT** apply through any type of irrigation equipment.
- **Rainfast period** - Poast is rainfast 1 hour after application.
Poast® herbicide is a broad-spectrum, postemergence herbicide for selective control of annual and perennial grass weeds listed in Table 1. Poast does not control sedges or broadleaf weeds. Refer to Table 2 for crops and other use sites to which Poast can be applied.

Mode of Action

Poast® herbicide affects lipid synthesis by inhibition of Acetyl CoA Carboxylase (ACCase) in plants. It belongs to herbicide mode-of-action Group 1. Lipids are an important component in cell division and plant growth. If plant cells cannot divide, the plant will die.

Poast rapidly enters the target grass weed through its foliage and moves throughout the plant. Effects range from slowing or stopping growth (typically within 2 days) to foliage reddening and leaf tip burn. Foliage burnback may occur later. Symptoms are typically observed within 3 weeks of application of Poast, depending on environmental conditions.

Crop Tolerance

All crops listed on this label are tolerant to Poast at all stages of growth.

Herbicide Resistance

Repeated use of Poast or other Group 1 herbicides may lead to the selection of naturally occurring grass weed biotypes with resistance to Group 1 herbicides. If poor herbicide performance cannot be attributed to adverse weather conditions or improper application methods, a resistant biotype may be present. Consult your local BASF Corporation representative or Cooperative Extension agent for assistance.

While weed resistance to Group 1 herbicides are relatively infrequent, populations of resistant biotypes are known to exist. The frequency of resistant biotypes may increase if Group 1 herbicides are used repeatedly in the same field or in successive years as the primary control of the target species. If resistant biotypes dominate the weed population, it may result in partial or total loss of control by other Group 1 herbicides. Weeds resistant to Group 1 herbicides may be effectively managed using herbicide(s) from a different group. Proper stewardship practices should be employed to ensure the long-term effectiveness of Poast.

To aid in the prevention of developing resistant weeds, the following herbicide resistance management principles should be followed where practical:

- Resistance management should be part of a diversified weed control strategy that integrates chemical, cultural, and mechanical (tilage) control tactics. Cultural control tactics include crop rotation, proper fertilizer placement, and optimum seeding rate/row spacing. Start with clean fields using tillage or an effective burndown herbicide program. These practices encourage crop growth and improve competitiveness against weeds.
- Clean equipment before moving to a different field to avoid spread of resistant weeds.
- Scout fields before application to ensure herbicides and rates will be appropriate for the weeds species and weed sizes present.
- Always follow labeled application rate and weed growth stage specifications.
- Use sequential programs with preemergence herbicides that provide soil residual control of weeds to reduce early season weed competition and allow for timely in-crop postemergence herbicide applications.
- DO NOT rely on a single herbicide site of action for weed control during the growing season.
- Avoid application of herbicides with the same site of action more than twice a season.
- Use tank mixes or premixes with other herbicides possessing different sites of action that are also effective on the target weeds.
- Scout fields after herbicide application to identify areas where weed control was ineffective. Control weed escapes with herbicides possessing a different site of action or use a mechanical control measure. Weed escapes should not be allowed to reproduce by seed or to proliferate vegetatively.
- Contact your Poast supplier and/or your local BASF representative to report weed escapes.
- Consult your local BASF representative, local or state cooperative extension service, professional consultants or crop advisors, or other qualified authority to determine appropriate actions if you suspect resistant weeds.
- Suspected herbicide-resistance weeds may be identified by these indicators:
  - failure to control a weed species normally controlled by the herbicide at the dose applied, especially if control is achieved on adjacent weeds;
  - a spreading patch on non-controlled plants of a particular weed species; and
  - surviving plants mixed with controlled individuals of the same species.

Cultivation

DO NOT cultivate within 5 days before or 7 days after applying Poast. Cultivating 7 days or more after application may help provide season-long weed control.

Spray Drift Management

- Avoiding spray drift at the application site is the responsibility of the applicator.
- DO NOT spray when conditions favor drift beyond the area intended for application.
- Apply only when the wind speed is 10 mph or less.

NOTE: For all nonaerial applications, wind speed must be measured at the application site on the upwind side immediately before application.
- Conditions that may contribute to drift include spray droplet size, spray nozzle/pressure combinations, wind speed and direction, temperature and humidity, temperature inversions, etc.
- All aerial and ground application equipment must be properly maintained and calibrated using appropriate carriers.
- Contact your Cooperative Extension agent for spray drift prevention guidelines specific to your area.
Spray Drift Reduction Advisory Information

Information on Droplet Size
The best drift management strategy is to apply the largest droplet size that provides sufficient coverage and control and is consistent with acceptable efficacy. Applying larger droplets reduces drift potential but will not prevent drift if applications are made improperly or under unfavorable environmental conditions (see Wind, Temperature and Humidity; and Temperature Inversions sections of this label).

Controlling Droplet Size
- **Volume** - Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets. Use a minimum of 5 gallons of water per acre. If grass weed foliage or crop canopy is dense, increase water volume to at least 10 gallons of water per acre.
- **Pressure** - Use the lower spray pressures recommended for the nozzle and DO NOT exceed the nozzle manufacturer’s recommended pressures. Higher pressure reduces droplet size but does not improve canopy penetration. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- **Number of Nozzles** - Use the minimum number of nozzles that provide uniform coverage.
- **Nozzle Orientation** - Orienting nozzles so spray is released backward parallel to the airstream produces larger droplets than other orientations. Significant deflection from horizontal will reduce droplet size and increase drift potential.
- **Nozzle Type** - Use a nozzle type designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid-stream or straight-stream nozzles oriented straight back produce the largest droplets and lowest drift. Apply only as a medium or coarse spray (ASABE standard 572) or a volume mean diameter of 300 microns or greater for spinning atomizer nozzles.
- **Boom Length** - For some use patterns, reducing the effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.
- **Application Height** - Applications should not be made at a height greater than 10 feet above the top of the largest plants, unless a greater height is required for aircraft safety. Making applications at the lowest height possible reduces exposure of droplets to evaporation and wind.

Swath Adjustment
When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the upwind and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase with increasing drift potential (e.g., higher wind, smaller droplets).

Wind
Drift potential is lowest between wind speeds of 2 to 10 mph. However, many factors, including droplet size and equipment type, determine drift potential at any given speed. Application must be avoided if wind speed is below 2 mph because of variable wind direction and high inversion potential.

**NOTE:** Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

Temperature and Humidity
Low humidity and high temperatures increase the evaporation of spray droplets, increasing the likelihood of spray drift. If applications are made in low humidity, set up the application equipment to produce larger droplets to compensate for evaporation; however, droplets should remain in the medium droplet size category. Droplet evaporation is most severe when conditions are both hot and dry.

Temperature Inversions
Applications must not occur during a temperature inversion because drift potential is high. If inversion conditions are suspected, consult with local weather services before making an application. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions because of the light, variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light-to-no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

Sensitive Areas
The pesticide must only be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitat for threatened or endangered species, or nontarget crops) is minimal and when wind is blowing away from sensitive areas.

Tank Mixing Information
It is the pesticide user’s responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

**Poast® herbicide** is a broad-spectrum, postemergence herbicide for selective control of annual and perennial grass weeds. For broadleaf weed control, **Poast** should be used in combination with, or in sequence with, effective broadleaf herbicides.
herbicides approved for use. Read and follow the applicable restrictions and limitations and directions for use on all product labels in a tank mix. Always follow the most restrictive label use directions. Refer to the Use-specific Information section of this label for tank mixing restrictions.

Physical incompatibility, reduced grass weed control, or crop injury may result from mixing Poast® herbicide with other pesticides (fungicides, herbicides, insecticides, or miticides), additives, or fertilizers not recommended on this label.

Before mixing components, always perform a compatibility test in a quart-size jar. Add components in the same order as listed in the Mixing Order section of this label.

Compatibility Test for Tank Mix Components

1. For a 20 gallons per acre spray volume, start with 3.3 cups (800 mL) of water from the intended source at the source temperature. For other spray volumes, adjust rates accordingly. For each dry product, add 2 teaspoons per pound of product per acre. For each liquid product, add 1 teaspoon per pint of product per acre.
2. Always cap the jar and invert 10 times between component additions.
3. When the components have all been added to the jar, let the solution stand for 15 minutes.
4. Evaluate the solution for uniformity and stability. The spray solution should not have free oil on the surface; fine particles that precipitate to the bottom; or a thick (clabbered) texture. DO NOT use any spray solution that could clog spray nozzles.

Additives

To achieve consistent post-emergence grass weed control with Poast, always use a crop oil concentrate (COC) or methylated/modified seed oil (MSO) as directed in Table 3. In addition, ammonium sulfate (AMS) or urea ammonium nitrate (UAN) will enhance activity on certain grass weed species in certain crops (refer to the Use-specific Information section).

NOTE: Using Poast with adjuvants at temperature above 90° F (or anytime the temperature exceeds 100° F regardless of the humidity) and relative humidity at or above 60% may result in injury to many vegetable crops.

Consult your BASF Corporation representative or Cooperative Extension agent for more information on the use of additives.

Application Instructions

Apply Poast® herbicide to actively growing grass weeds by aerial or ground application at the rates and timing (maximum height) listed in Table 4 (annual grass weeds), Table 5 (perennial grass weeds), and Table 6 (early and rescue treatments to control select annual grass weeds), as instructed in the Use-specific Information section of this label. For small area application or spot application, refer to Table 7.

**NOTE:** The most effective control will be achieved by applying postemergence applications of Poast early in the growing season, when grass weeds are small. Poast may not be effective on grass weeds that have grown taller than the maximum heights listed.

Apply Poast to the foliage of grass weeds uniformly and completely; large leaf canopies shelter smaller grass weeds and can prevent adequate spray coverage. **DO NOT** spray to the point of runoff.

**Irrigation**

In irrigated areas, it may be necessary to irrigate before application of Poast to ensure active grass weed growth.

**Cleaning Application Equipment**

Clean application equipment thoroughly by using a strong detergent or commercial sprayer cleaner according to the manufacturer’s directions, followed by triple rinsing the equipment before and after applying Poast.

**Mixing Order**

Maintain agitation throughout mixing and application.

1. **Water** - Fill tank 3/4 full of clean water and start agitation.
2. **Inductor** - If an inductor is used, rinse it thoroughly after each component has been added.
3. **Products in PVA bags** - Place any product contained in water-soluble PVA bags into the mixing tank. Wait until all water-soluble PVA bags have fully dissolved and the product is evenly mixed in the spray tank before continuing.
4. **Water-soluble additives** (including dry and liquid fertilizers such as AMS or UAN)
5. **Water-dispersible products** (such as dry flowables, wettable powders, suspension concentrates, or suspo-emulsions)
6. **Water-soluble products**
7. **Emulsifiable concentrates** (such as Poast or COC)
8. **Remaining quantity of water**
Aerial Application Methods and Equipment

The interaction of many equipment-related and weather-related factors determines the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making application decisions. DO NOT apply under circumstances where possible drift to unprotected persons; to food, forage, or other plantings that might be damaged; or to crops that would then be unfit for sale, use, or consumption can occur.

The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements DO NOT apply to forestry applications, public health uses, or to applications using dry formulations.

1. The distance of the outermost nozzles on the boom must not exceed 3/4 the length of the fixed wingspan or rotor blade diameter.
2. Nozzles must always point backward parallel with the airstream and never point downward more than 45 degrees.

Where a state has more stringent regulations, they must be observed. The applicator should be familiar with and take into account the information covered in the Spray Drift Reduction Advisory Information section of this label.

Ground Application Methods and Equipment

(Broadcast)

- Apply with nozzle height no more than 4 feet above ground or crop canopy.
- DO NOT apply when conditions favor drift from target area or when wind speed is greater than 10 mph.
- DO NOT use selective application equipment such as recirculating sprayers or wiper applicators.

**Water Volume.** Use 5 to 20 gallons of spray solution per acre. In Region 1 (the West and High and Rolling Plains Region; refer to Regional Descriptions), DO NOT use less than 10 gallons of spray solution per acre.

**Spray Pressure.** Use 40 to 60 PSI (measured at the boom, not at the pump or in the line). When crop foliage and grass weed foliage are dense, use a maximum of 20 gallons of water per acre and 60 PSI.

**Application Equipment.** Use standard high-pressure pesticide flat fan or hollow cone nozzles spaced up to 20 inches apart. DO NOT use flood, whirl chamber, or controlled droplet applicator nozzles because erratic coverage can cause inconsistent grass weed control. To control tall grass weeds, such as volunteer corn, the boom should be high enough to cover the entire plant. Refer to the nozzle manufacturer’s directions for recommended height. When a crop, such as cotton, is 24 inches or taller and the grass weeds are below the crop canopy, use drop nozzles to ensure good coverage of grass weeds.

Ground Application Methods and Equipment

(Banding)

- Poast® herbicide may be applied by banding to control annual grass weeds.
- DO NOT make banding applications to control perennial grass weeds.
- For banding applications, follow the directions in the Ground Application Methods and Equipment (Broadcast) section of this label.

When applying Poast by banding, use the following formulas to calculate the amount of herbicide and water volume needed:

\[
\text{Bandwidth in inches} \times \frac{\text{Broadcast rate per acre}}{\text{Row width in inches}} = \frac{\text{Bandwidth herbicide rate per acre}}{\text{Row width in inches}}
\]

\[
\text{Bandwidth in inches} \times \frac{\text{Broadcast volume per acre}}{\text{Row width in inches}} = \frac{\text{Banding water volume rate per acre}}{\text{Row width in inches}}
\]
**Application Rate**

Grass weed application rate and timing (maximum height) are based on growing regions as described in the Regional Descriptions section of this label. Follow the directions for your region only.

(continued)
Table 4. Application Rate and Timing (Maximum Height) - Annual Grass Weeds (continued)

1 Add nitrogen to COC or MSO to improve control.  
2 Apply **Poast** herbicide before tillering.  
3 DO NOT apply **Poast** on red sprangletop in Arizona, California, or western New Mexico.  
4 In **Region 1**, volunteer cereals emerging from late spring through early summer (May through July) may be partially or incompletely controlled because of unfavorable conditions at application time.  
N/A = Not Applicable

1 Add nitrogen to COC or MSO to improve control. Cultivate 7 to 14 days after first or sequential application.  
* Allow a minimum of 14 days between sequential applications.  
** Use 2.5 pints per acre for the following forage crops: alfalfa, birdsfoot trefoil, clover, and sainfoin.  
N/A = Not Applicable
Early Treatment and Rescue Treatment to Control Select Annual Grass Weeds in Region 2 (Midwest, South, and Northeast)

- If Poast® herbicide cannot be applied at the specified height, taller annual grass weeds may be controlled with a later application by increasing the rate of Poast as directed in Table 6.
- DO NOT exceed the maximum application rate per acre per season as listed in Use-specific Information section of the label.

¹ Add nitrogen to COC or MSO to improve control.
² For flax, use 0.5 pint per acre when foxtail is less than 1.5 inches high. When using the early treatment rate, foxtail species should not have started to tiller.

* Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia - Use 1.0 pint per acre.
N/A = Not Applicable
Small Area Application or Spot Application

- **DO NOT** make small area application or spot application in addition to broadcast or banding applications on the same area.
- When using knapsack sprayers or high-volume spray equipment with handguns or other suitable nozzle arrangements, prepare a 1.0% to 1.5% spray solution of **Poast® herbicide** in water unless otherwise directed in the **Use-specific Information** section of this label.
- Use a concentration of 1% crop oil concentrate (COC) or methylated seed oil (MSO). Prepare the desired volume of spray solution by mixing the amount of **Poast** and the amount of COC or MSO in water according to **Table 7**.

2 tablespoons = 1 fluid ounce

* Annual grass weeds up to 6-inches tall

** Annual grass weeds up to 12-inches tall. Perennial grass weeds: Application may be repeated as needed but not to exceed the specified annual application rate.
Use-specific Information

**Alfalfa, Birdsfoot Trefoil, Sainfoin**
(dry and undried)

- **PHI**
  - Hay (dry): 14 days before cutting
  - Forage (undried): 7 days before grazing, feeding, or cutting
- **Maximum Single Application Rate**
  - Hay (dry) and Forage (undried): 2.5 pints/acre
- **Maximum Seasonal Application Rate**
  - Hay (dry) and Forage (undried): 6.5 pints/acre

There are no livestock grazing or feeding restrictions in alfalfa, birdsfoot trefoil, or sainfoin.

Aerial and ground application allowed.

**Poast** herbicide may be applied to seedling or established alfalfa grown for hay, silage, green chop, direct grazing, or seed. Apply **Poast** before mowing for the best control of annual grass weeds. Mowed grass weeds may form large crowns and could require repeat applications for control.

**NOTE:** In alfalfa, the addition of ammonium sulfate (AMS) or urea ammonium nitrate (UAN) will enhance activity on certain grass weed species.

**Irrigated Alfalfa, Birdsfoot Trefoil, and Sainfoin**

- The timing of irrigation is important to achieve optimum grass weed control.
- **Poast** application 2 to 4 days after irrigation is most effective because:
  - Grass weeds have resumed active growth.
  - Grass weeds have less chance to grow too large.
  - Later applications allow plants to begin to canopy, which interferes with spray coverage.
- Irrigation shortly after application (e.g., 2 days) can be effective, but more consistent control is obtained when irrigation is made before application.

**Annual Grass Weed Control**

- Apply **Poast** at the rate and timing (maximum height) indicated in Table 4 and Table 6.
- If grass weeds have been cut, apply after 2 to 4 inches of regrowth (so there will be enough leaf area for absorption) and before exceeding maximum height (refer to Table 4 and Table 6).
- Apply before plant canopies cover annual grass weeds and interfere with spray coverage. **NOTE:** Timing applications to after a cutting following an irrigation or rainfall will allow grass weeds to regrow to a treatable size.
- Spray spring-germinating and summer-germinating grass weeds as early in the season as possible.
- Spray fall-germinating grass weeds in the fall soon after they begin growing but before any killing frost.

**Perennial Grass Weed Control**

- **Poast** effectively controls or suppresses perennial grass weeds listed in Table 5. However, a program of repeat applications will usually provide the best results.
- The most economical way of controlling perennial grass weeds is to disk the field before stand establishment to thoroughly fragment rhizomes or stolons.
- In summer and fall seedings, cool-season grass weeds (e.g., perennial ryegrass, quackgrass, wirestem muhly) can become competitive under cool fall conditions. Fall applications will reduce late-season growth and limit accumulation of nutrient reserves in roots and rhizomes.
- In established stands, apply in the spring when conditions favor active growth and before storage tissues have increased their nutrient reserves.
- Make additional applications on any grass regrowth in later cuttings.

**Apricot**
(bearing)

- **PHI** - 25 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- DO NOT allow livestock to graze or feed in treated apricot groves or orchards. DO NOT feed livestock anything from treated apricot groves or orchards.
- Ground application allowed. DO NOT apply by air.

**Artichoke, Globe**

- **PHI** - 7 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- DO NOT allow livestock to graze or feed treated field.
- DO NOT feed livestock anything from treated field.
- Aerial and ground application allowed.

**Asparagus**

- **PHI** - 1 day
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- DO NOT allow livestock to graze or feed treated field.
- DO NOT feed livestock anything from treated field.
- Aerial and ground application allowed.

**Avocado**
(nonbearing)

- **PHI** - 1 year
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 7.5 pints/acre
- DO NOT allow livestock to graze or feed in treated avocado groves or orchards. DO NOT feed livestock anything from treated avocado groves or orchards.
- Ground application allowed. DO NOT apply by air.

To minimize potential for tree injury, direct spray away from leaves where possible.
### Beans, Dry and Succulent

- **PHI**
  - Dry: 30 days
  - Succulent: 15 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 4.0 pints/acre
- There are no livestock grazing or feeding restrictions in beans (dry or succulent).
- Aerial and ground application allowed.

To control crabgrass, shattercane, volunteer corn and all volunteer cereals, and witchgrass, add 2.5 pounds of AMS or 4.0 to 8.0 pints of UAN.

---

### Beet, Garden/Table

- **PHI** - 60 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field.
- Aerial and ground application allowed.

---

### Beet, Sugar

(see Sugar Beet)

---

### Blueberry

(highbush and lowbush)

**DO NOT** use on blueberry in California.

- **PHI** - 1 day (highbush), 30 days (lowbush), 45 days (juneberry, lingonberry, and salal)
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- **DO NOT** make more than 2 applications per season, allowing a minimum of 14 days between applications.
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field.
- Aerial and ground application allowed.

---

### Brassica Vegetables

[including: Broccoli (including Chinese and Raab); Brussels Sprouts; Cabbage (Bok Choy, Chinese Mustard, Napa); Cauliflower; Collards; Kale; Kohlrabi; Mustard Greens; Rape Greens]

- **PHI** - 30 days
  - **EXCEPTION:** Mustard greens may be harvested after 14 days.
- **Maximum Single Application Rate** - 1.5 pints/acre
- **Maximum Seasonal Application Rate** - 3.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field.
- Aerial and ground application allowed.

---

### Bulb Vegetables

[including: Garlic; Leek; Onion (Dry Bulb and Green); Shallot]

- **PHI** - 30 days
- **Maximum Single Application Rate** - 1.5 pints/acre
- **Maximum Seasonal Application Rate** - 4.5 pints/acre
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field.
- Aerial and ground application allowed.

---

### Caneberries

[All varieties and/or hybrids of these: Blackberry; Raspberry (Red and Black); Loganberry; Youngberry]

- **PHI** - 45 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field.
- Aerial and ground application allowed.
  - **EXCEPTION:** **DO NOT** apply by air in California.

---

### Carrot

- **PHI** - 30 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field.
- Aerial and ground application allowed.

---

### Cherry, Sweet and Tart

(bearing and nonbearing)

- **PHI** - 25 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- **DO NOT** allow livestock to graze or feed in treated cherry (sweet or tart) groves or orchards. **DO NOT** feed livestock anything from treated cherry (sweet or tart) groves or orchards.
- Ground application allowed. **DO NOT** apply by air.

---

### Citrus

- **PHI** - 15 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 10.0 pints/acre
- There are no livestock grazing or feeding restrictions in citrus. **NOTE:** Pulp and waste may be fed to livestock.
- Ground application allowed. **DO NOT** apply by air.
• For the most economical perennial grass weed control, spray fall-germinating grass weeds in the fall soon after they begin growing, but before any killing frost. Spray spring-germinating and summer-germinating grass weeds as early in the season as possible.
• There are no livestock grazing or feeding restrictions in clover.
• Aerial and ground application allowed.

Poast® herbicide may be applied to seedling or established clover grown for hay, silage, green chop, direct grazing, or seed. Apply Poast before mowing for the best control of annual grass weeds. Mowed grass weeds may form large crowns and could require repeat applications for control.

DO NOT tank mix with 2,4-DB when applying Poast to clover.

Irrigated Clover
• Irrigation can be critical to the success of Poast to start grass weeds growing again.
• Poast application 2 to 4 days after irrigation is most effective because:
  - Grass weeds have resumed active growth.
  - Grass weeds have less chance to grow too large.
  - Later applications allow plants to begin to canopy, which interferes with spray coverage.
• Irrigation shortly after application (e.g., 2 days) can be effective, but more consistent control is achieved when irrigation is made before application.

Annual Grass Weed Control
• Apply Poast at the rate and timing (maximum height) indicated in Table 4 and Table 6.
• If grass weeds have been cut, apply after 2 to 4 inches of regrowth (so there will be enough leaf area for absorption) and before exceeding maximum height (refer to Table 4 and Table 6).
• Apply before plant canopies cover grass weeds and interfere with spray coverage. NOTE: Timing applications to after a cutting following an irrigation or rainfall will allow grass weeds to regrow to treatable size.
• Spray spring-germinating and summer-germinating grass weeds as early in the season as possible.
• Spray fall-germinating grass weeds in the fall soon after they begin growing, but before any killing frost.

Perennial Grass Weed Control
• Poast effectively controls or suppresses perennial grass weeds listed in Table 5. However, a program of repeat applications will usually provide the best results.
• For the most economical perennial grass weed control, disk the field before stand establishment to thoroughly fragment rhizomes or stolons.

• In summer and fall seedings, cool-season grass weeds (e.g., perennial ryegrass, quackgrass, wirestem muhly) can become competitive under cool fall conditions. Fall applications will reduce late-season growth and limit accumulation of nutrient reserves in roots and rhizomes.
• In established stands, apply in the spring when conditions favor active growth and before storage tissues have increased their nutrient reserves.
• Make additional applications on any grass regrowth in the later cuttings.

Clover
• PHI
  - Hay (dry): 20 days before grazing, feeding, or cutting
  - Forage (undried): 7 days before grazing, feeding, or cutting
• Maximum Single Application Rate
  - Hay (dry) and Forage (undried): 2.5 pints/acre
• Maximum Seasonal Application Rate
  - Hay (dry) and Forage (undried): 6.5 pints/acre
• There are no livestock grazing or feeding restrictions in clover.
• Aerial and ground application allowed.

Poast® herbicide may be applied to seedling or established clover grown for hay, silage, green chop, direct grazing, or seed. Apply Poast before mowing for the best control of annual grass weeds. Mowed grass weeds may form large crowns and could require repeat applications for control.

DO NOT tank mix with 2,4-DB when applying Poast to clover.

Irrigated Clover
• Irrigation can be critical to the success of Poast to start grass weeds growing again.
• Poast application 2 to 4 days after irrigation is most effective because:
  - Grass weeds have resumed active growth.
  - Grass weeds have less chance to grow too large.
  - Later applications allow plants to begin to canopy, which interferes with spray coverage.
• Irrigation shortly after application (e.g., 2 days) can be effective, but more consistent control is achieved when irrigation is made before application.

Annual Grass Weed Control
• Apply Poast at the rate and timing (maximum height) indicated in Table 4 and Table 6.
• If grass weeds have been cut, apply after 2 to 4 inches of regrowth (so there will be enough leaf area for absorption) and before exceeding maximum height (refer to Table 4 and Table 6).
• Apply before plant canopies cover grass weeds and interfere with spray coverage. NOTE: Timing applications to after a cutting following an irrigation or rainfall will allow grass weeds to regrow to treatable size.
• Spray spring-germinating and summer-germinating grass weeds as early in the season as possible.
• Spray fall-germinating grass weeds in the fall soon after they begin growing, but before any killing frost.

Perennial Grass Weed Control
• Poast effectively controls or suppresses perennial grass weeds listed in Table 5. However, a program of repeat applications will usually provide the best results.
• For the most economical perennial grass weed control, disk the field before stand establishment to thoroughly fragment rhizomes or stolons.

• In summer and fall seedings, cool-season grass weeds (e.g., perennial ryegrass, quackgrass, wirestem muhly) can become competitive under cool fall conditions. Fall applications will reduce late-season growth and limit accumulation of nutrient reserves in roots and rhizomes.
• In established stands, apply in the spring when conditions favor active growth and before storage tissues have increased their nutrient reserves.
• Make additional applications on any grass regrowth in the later cuttings.

Conservation Reserve Land
For this application, DO NOT use west of the Rocky Mountains.
• PHI - There is no PHI when applying to Conservation Reserve land unless application is being made to alfalfa, birdsfoot trefoil, clover, or sainfoin.
  **Alfalfa, birdsfoot trefoil, or sainfoin PHI**
  - Hay (dry): 14 days before cutting
  - Forage (undried): 7 days before grazing, feeding, or cutting
  **Clover cover crops PHI**
  - Hay (dry): 20 days before cutting
  - Forage (undried): 7 days before grazing, feeding, or cutting
• Maximum Single Application Rate - 2.5 pints/acre
• Maximum Annual Application Rate - 7.5 pints/acre
  **EXCEPTION:** If applying to alfalfa, birdsfoot trefoil, clover, or sainfoin, DO NOT apply more than a total of 6.5 pints/acre/season.
• DO NOT harvest or graze cover crops other than alfalfa, birdsfoot trefoil, clover, or sainfoin treated with Poast. DO NOT feed livestock cover crops other than alfalfa, birdsfoot trefoil, clover, or sainfoin from treated Conservation Reserve Land.
• Aerial and ground application allowed.

Broadleaf Cover Crops. The growth of broadleaf cover crops (e.g., alfalfa, birdsfoot trefoil, clover, lespedeza, vetches) will not be affected by application of Poast.

Grass Cover Crops. Most seeded grass crops (e.g., bromegrasses, oats, orchardgrass, ryegrass, Sudangrass, tall fescue, or timothy) will be injured or killed by Poast. **DO NOT** apply Poast to these grass cover crops if injury is undesirable.

Corn, Field including Poast® Protected hybrids
DO NOT use on field corn in California.
• PHI
  - Grain and Fodder: 60 days
  - Forage and Silage: 45 days
• Maximum Single Application Rate - 1.5 pints/acre
• Maximum Seasonal Application Rate - 3.0 pints/acre
• There are no livestock grazing or feeding restrictions in field corn.
• Aerial and ground application allowed.
Preplant Burndown Treatment

Apply Poast® herbicide to actively growing grass weeds at 1.0 pint/acre 30 days or more before planting corn. Use 2.0 to 4.0 pints of UAN or 1.0 to 2.0 pounds of AMS plus COC or MSO at 1.0 to 2.0 pints/acre.

Poast® Protected hybrids ONLY

Only Poast Protected field corn hybrids are tolerant to in-crop Poast application. DO NOT use on other field corn hybrids or severe crop injury will occur to field corn hybrids not designated as Poast Protected corn.

Over-the-top application (after corn emergence) of Poast in Poast Protected field corn may be made until the onset of pollen shed if appropriate preharvest intervals are observed. DO NOT apply Poast after pollination.

To control crabgrass, shattercane, volunteer corn and all volunteer cereals, and witchgrass, add 2.5 pounds of AMS or 4.0 to 8.0 pints of UAN.

Cranberry

DO NOT use on cranberry in California.
- PHI - 60 days
- Maximum Single Application Rate - 2.5 pints/acre
- Maximum Seasonal Application Rate - 5.0 pints/acre
- DO NOT allow livestock to graze or feed treated bog or field. DO NOT feed livestock anything from treated bog or field.
- Aerial and ground application allowed.

Crops Grown for Seed

Poast can be used on all crops listed in this label when they are grown for seed production. Use the rate indicated for the crop, as detailed in this Use-specific Information section. Slight modifications in application methods may be required for certain seed crops because of crop canopy or different cultural methods from the corresponding crop.

Cucurbit Vegetables

[including: Cantaloupes (all); Cucumber; Gherkin; Honeydew Melon; Muskmelon (all); Pumpkin; Squash (all); Watermelon]
- PHI - 14 days
  EXCEPTION: Cantaloupe and cucumber may be harvested after 3 days.
- Maximum Single Application Rate - 1.5 pints/acre
- Maximum Seasonal Application Rate - 3.0 pints/acre
- DO NOT allow livestock to graze or feed treated field.
- DO NOT feed livestock anything from treated field.
- Aerial and ground application allowed.

Date (nonbearing)

- PHI - 1 year
- Maximum Single Application Rate - 2.5 pints/acre
- Maximum Seasonal Application Rate - 7.5 pints/acre
- DO NOT allow livestock to graze or feed in treated date groves or orchards. DO NOT feed livestock anything from treated date groves or orchards.
- Ground application allowed. DO NOT apply by air.

Cotton

- PHI - 40 days
- Maximum Single Application Rate - 2.5 pints/acre
- Maximum Seasonal Application Rate - 7.5 pints/acre
- DO NOT allow livestock to graze or feed treated field.
- DO NOT feed livestock anything from treated field.
  EXCEPTION: Processed meal may be fed to animals.
- Aerial and ground application allowed.

To control crabgrass, shattercane, volunteer corn and all volunteer cereals, and witchgrass, add 2.5 pounds of AMS or 4.0 to 8.0 pints of UAN.

Fig (nonbearing)

- PHI - 1 year
- Maximum Single Application Rate - 2.5 pints/acre
- Maximum Seasonal Application Rate - 7.5 pints/acre
- DO NOT allow livestock to graze or feed in treated fig groves or orchards. DO NOT feed livestock anything from treated fig groves or orchards.
- Ground application allowed. DO NOT apply by air.
To minimize potential for tree injury, direct spray away from leaves where possible.

**Fine Fescue Grown for Turfgrass Seed in Idaho, Oregon, and Washington**

- **PHI** - 14 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- **DO NOT** apply more than 2 applications per season. Allow 30 days between applications.
- There are no livestock grazing or feeding restrictions in fine fescue grown for turfgrass seed.
  
  **NOTE:** Treated fescue screenings or hay may be fed to animals.

- Ground application allowed. **DO NOT** apply by air.

Only apply Poast® herbicide to fine fescue varieties classified as creeping red (*Festuca rubra*), Chewings (*Festuca nigrescens*), and hard fescue (*Festuca ovina*). Use standard high-pressure pesticide hollow cone or flat fan nozzles (minimum of 40 PSI at the nozzle); apply at least 10 gallons of water per acre. If foliage is dense, increase water volume to 20 gallons per acre (minimum of 60 PSI). Thorough foliar spray coverage is essential.

- **DO NOT** apply to tall fescue (*Schedonorus arundinaceus*) or any other desired grass plant. Injury will occur.

- Poast does **NOT** control annual bluegrass (*Poa annua*) or rattail fescue (*Vulpia myuros*).

- **DO NOT** apply if rainfall is expected within 1 hour of application.

- **DO NOT** use flood or whirl chamber nozzles or selective application equipment (e.g., recirculating sprayers, wiper applicators, shielded applicators).

For control of annual ryegrass, colonial and highland bentgrasses, cheatgrass/downy brome, and German velvetgrass, apply when fine fescue is semi-dormant (generally November 1 through March 15). Application at other times of the year can result in reduced control. Refer to Table 8 for application rate and timing (maximum height) information.

</table>

**NOTE:** Use the higher rate on well-established grass weeds.

*When fine fescue is semi-dormant  
**If regrowth occurs or new plants emerge, make a second application at the same rate.

**Flax**

**DO NOT** use on flax in California.

- **PHI** - 75 days
- **Maximum Single Application Rate** - 1.5 pints/acre
- **Maximum Seasonal Application Rate** - 4.0 pints/acre
- There are no livestock grazing or feeding restrictions in flax. **NOTE:** Processed meal may be fed to animals.

- Aerial and ground application allowed.

To control crabgrass, shattercane, volunteer corn and all volunteer cereals, and witchgrass, add 2.5 pounds of AMS or 4.0 to 8.0 pints of UAN.

**Fruiting Vegetables (excluding Tomato)**

[including: Eggplant; Groundcherry; Pepino; Peppers (all); Tomatillo]

- **PHI** - 20 days

**EXCEPTION:** Peppers (all) may be harvested after 7 days.

- **Maximum Single Application Rate** - 1.5 pints/acre
- **Maximum Seasonal Application Rate** - 4.5 pints/acre
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field.

- Aerial and ground application allowed.
### Head-type and Petiole-type Vegetables

- **Cardoon, Celery; Celery (Chinese); Celtuce; Fennel (Florence); Lettuce (Head); Radicchio; Rhubarb; Swiss Chard**

### Horseradish

**DO NOT** use on horseradish in California.

- **PHI** - 60 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field.
- **Ground application allowed.** **DO NOT** apply by air.

### Leafy Vegetables

- **Amaranth; Arugula; Chervil; Chrysanthemum (Edible and Garland); Cilantro; Corn Salad; Cress (Garden and Upland); Dandelion; Dock; Endive (Escarole); Lettuce (Leaf); Orach; Parsley; Purslane (Garden and Winter); Spinach (including New Zealand and Vine)**

- **PHI** - 15 days
- **Maximum Single Application Rate** - 1.5 pints/acre
- **Maximum Seasonal Application Rate** - 3.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field.
- **Aerial and ground application allowed.**

### Mint

- **PHI** - 20 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field.
- **Aerial and ground application allowed.**

### Nectarine (bearing)

- **PHI** - 25 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- **DO NOT** allow livestock to graze or feed in treated nectarine groves or orchards.
- **DO NOT** feed livestock anything from treated nectarine groves or orchards.
- **Ground application allowed.** **DO NOT** apply by air.

### Nonagricultural Land

- **DO NOT** use on red sprangletop in Arizona, California, or western New Mexico.

- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Annual Application Rate** - 7.5 pints/acre
- **DO NOT** allow livestock to graze or feed treated nonagricultural land.
- **DO NOT** feed livestock anything from treated nonagricultural land.
- **Ground application allowed.** **DO NOT** apply by air.

Nonagricultural lands include private, public, and military lands as follows:

- Uncultivated nonagricultural areas (including sewage disposal areas and airport, highway, railroad, and utility rights-of-ways, roadsides, and other paved areas)
- Uncultivated agricultural areas - Noncrop producing (including farmyards, fuel and other storage areas, fence and hedge rows, nonirrigation ditchbanks, and barrier strips)
• Industrial sites - Outdoor (including lumberyards, electrical transformer and pipeline pumping stations, storage areas, and tank farms)
• Natural areas (including wildlife management areas, wildlife openings, wildlife habitats, recreation areas, campgrounds, trailheads, and trails)
• Potting soil and topsoil.

**NOTICE TO USER:** Due to difference in plant species/variety and application techniques, neither the manufacturer nor the seller has determined whether or not Poast® herbicide can be safely used on all species/varieties under all conditions. It is the responsibility of the applicator and grower to test and determine if Poast can be used safely on the species/variety to be treated under the conditions expected to be encountered at the time of application. Test in a small area first, before wide-scale use. Any adverse conditions/effects should be visible within 7 days of application.

- **PHI** - 1 year
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 7.5 pints/acre
- **DO NOT** allow livestock to graze or feed in treated olive groves or orchards. **DO NOT** feed livestock anything from treated olive groves or orchards.
- **Ground application allowed. DO NOT apply by air.**

To minimize potential for tree injury, direct spray away from leaves where possible.

**Olive** (nonbearing)

<table>
<thead>
<tr>
<th>Peaches (bearing)</th>

</tr>
</tbody>
</table>

**Tank Mix Specific Restrictions**

- **DO NOT** make more than 1 application per season.
- **DO NOT** apply if rainfall or irrigation is expected within 6 hours of application.
- **DO NOT** apply to turfgrass less than 2 years old.
- **DO NOT** apply to newly established orchards. Trees must be at least 1 year old and in vigorous condition.

**Peanut**

<table>
<thead>
<tr>
<th>Peas, Dry and Succulent</th>

</tr>
<tr>
<td><strong>There are no livestock grazing or feeding restrictions in peas.</strong></td>
</tr>
<tr>
<td><strong>Aerial and ground application allowed.</strong></td>
</tr>
</tbody>
</table>

To control crabgrass, shattercane, volunteer corn and all volunteer cereals, and witchgrass, add 2.5 pounds of AMS or 4.0 to 8.0 pints of UAN.
### Pistachio

- **PHI**: 15 days
- **Maximum Single Application Rate**: 2.5 pints/acre
- **Maximum Seasonal Application Rate**: 10.0 pints/acre
- **DO NOT** allow livestock to graze or feed in treated pistachio groves or orchards. **DO NOT** feed livestock anything from treated pistachio groves or orchards.
- Ground application allowed. **DO NOT** apply by air.

For bearing pistachio trees, only apply as a directed spray to the grove floor.

### Plum (nonbearing)

- **PHI**: 1 year
- **Maximum Single Application Rate**: 2.5 pints/acre
- **Maximum Seasonal Application Rate**: 7.5 pints/acre
- **DO NOT** allow livestock to graze or feed in treated plum groves or orchards. **DO NOT** feed livestock anything from treated plum groves or orchards.
- Ground application allowed. **DO NOT** apply by air.

To minimize potential for tree injury, direct spray away from leaves where possible.

### Pome Fruits [including: Apple, Crabapple, Pear, Quince]

- **PHI**: 14 days
- **Maximum Single Application Rate**: 2.5 pints/acre
- **Maximum Seasonal Application Rate**: 7.5 pints/acre
- **DO NOT** allow livestock to graze or feed in treated pome fruit groves or orchards. **DO NOT** feed livestock anything from treated pome fruit groves or orchards. **EXCEPTION**: Pressed or processed apple waste may be fed to animals.
- Ground application allowed. **DO NOT** apply by air.

### Pomegranate (nonbearing)

- **PHI**: 1 year
- **Maximum Single Application Rate**: 2.5 pints/acre
- **Maximum Seasonal Application Rate**: 7.5 pints/acre
- **DO NOT** allow livestock to graze or feed in treated pomegranate groves or orchards. **DO NOT** feed livestock anything from treated pomegranate groves or orchards.
- Aerial and ground application allowed.

To minimize potential for tree injury, direct spray away from leaves where possible.

### Potato, Field (excluding sweet potato)

- **PHI**: 30 days
- **Maximum Single Application Rate**: 2.5 pints/acre
- **Maximum Seasonal Application Rate**: 5.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field. **EXCEPTION**: Potato wastes may be fed to animals.
- Aerial and ground application allowed.

**NOTE:** For heavy infestations of quackgrass in potato, apply 2.5 pints of **Poast® herbicide** per acre followed by a sequential application of 1.5 pints, if needed.

### Tank Mix Specific Restrictions with Metribuzin-containing Products

- In California, **DO NOT** tank mix Poast with metribuzin-containing products for application to potato.
- Only apply to non-early maturing russetted or white-skinned varieties of potato.
- **PHI**: 60 days, if tank mixed with metribuzin-containing products
- **DO NOT** apply unless there have been 3 prior successive days of sunny weather, or crop injury may occur.
- **DO NOT** add AMS or UAN.
- **DO NOT** use on: Bermudagrass, itchgrass, quackgrass, red rice, rhizome Johnsongrass, shattercane, volunteer cereal or corn, or wirestem muhly.

### Potato, Sweet (excluding field potato)

**Eastern U.S.** (Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia)

- **PHI**: 30 days
- **Maximum Single Application Rate**: 2.5 pints/acre
- **Maximum Seasonal Application Rate**: 5.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field.
- Aerial and ground application allowed.

**Western U.S.** (Arizona, California, Hawaii, Idaho, Nevada, Oregon, and Washington)

- **PHI**: 60 days
- **Maximum Single Application Rate**: 1.5 pints/acre
- **Maximum Seasonal Application Rate**: 5.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated field.
- **DO NOT** feed livestock anything from treated field.
- Aerial and ground application allowed.

**DO NOT** apply a tank mix of Poast and metribuzin to sweet potato (or yams).
Prune (nonbearing)

- PHI - 1 year
- Maximum Single Application Rate - 2.5 pints/acre
- Maximum Seasonal Application Rate - 7.5 pints/acre
- DO NOT allow livestock to graze or feed in treated prune groves or orchards. DO NOT feed livestock anything from treated prune groves or orchards.
- Ground application allowed. DO NOT apply by air.

To minimize potential for tree injury, direct spray away from leaves where possible.

Rapeseed Subgroup (excluding borage and flax)
[including: Crambe; Cuphea; Echium; Gold of pleasure (Camelina); Hare's ear mustard; Lesquerella; Lunaria; Meadowfoam; Milkweed; Mustard seed; Oil radish; Poppy; Rapeseed (Canola); Sesame; Sweet rocket]

DO NOT use on listed crops in the Rapeseed Subgroup in California.

- PHI - 60 days
- Maximum Single Application Rate - 2.5 pints/acre
- Maximum Seasonal Application Rate - 5.0 pints/acre
- DO NOT allow livestock to graze or feed treated field. DO NOT feed livestock anything from treated field.
- Aerial and ground application allowed.

To control crabgrass, shattercane, volunteer corn and all volunteer cereals, and witchgrass, add 2.5 pounds of AMS or 4.0 to 8.0 pints of UAN.

NOTE: In California, the maximum application rate is 2.0 pints per acre.

- PHI - 75 days
- Maximum Single Application Rate - 2.5 pints/acre
- Maximum Seasonal Application Rate - 5.0 pints/acre
- Only processed meal from seed and hay may be grazed or fed to livestock.
- Aerial and ground application allowed.

To control crabgrass, shattercane, volunteer corn and all volunteer cereals, and witchgrass, add 2.5 pounds of AMS or 4.0 to 8.0 pints of UAN.

Soybean

- PHI - 60 days
- Maximum Single Application Rate - 2.5 pints/acre
- Maximum Seasonal Application Rate - 5.0 pints/acre
- Maximum Annual Application Rate - 7.5 pints/acre
- DO NOT allow livestock to graze or feed treated field.
- Aerial and ground application allowed.

To control crabgrass, shattercane, volunteer corn and all volunteer cereals, and witchgrass, add 2.5 pounds of AMS or 4.0 to 8.0 pints of UAN.

Strawberry

- PHI - 7 days
- Maximum Single Application Rate - 2.5 pints/acre
- Maximum Seasonal Application Rate - 2.5 pints/acre
- DO NOT allow livestock to graze or feed treated field.
- Aerial and ground application allowed.
- EXCEPTION: DO NOT apply by air in California.

Sugar Beet

- PHI - 60 days
- Maximum Single Application Rate - 2.5 pints/acre
- Maximum Seasonal Application Rate - 5.0 pints/acre
- There are no livestock grazing or feeding restrictions in sugar beet. NOTE: Processed pulp and molasses may be fed to livestock.
- Aerial and ground application allowed.

To control crabgrass, shattercane, volunteer corn and all volunteer cereals, and witchgrass, add 2.5 pounds of AMS or 4.0 to 8.0 pints of UAN.

Sunflower

- PHI - 70 days
- Maximum Single Application Rate - 2.5 pints/acre
- Maximum Seasonal Application Rate - 2.5 pints/acre
- DO NOT allow livestock to graze or feed treated field.
- Aerial and ground application allowed.

To control crabgrass, shattercane, volunteer corn and all volunteer cereals, and witchgrass, add 2.5 pounds of AMS or 4.0 to 8.0 pints of UAN.

Commercially released varieties of sunflower are tolerant to Poast® herbicide at all stages of growth. DO NOT use Poast on sunflower inbred lines grown for seed. NOTE: Leaf speckling occasionally has been observed with no corresponding reduction in vigor or growth.

Tall Fescue Growth Suppression (in Nonagricultural Land)

Tall fescue must be 1-year old before the first application.

- Not registered for use on tall fescue for growth suppression in the State of California.
- Maximum Single Application Rate - 2.5 pints/acre
- Maximum Annual Application Rate - 7.5 pints/acre
- DO NOT allow livestock to graze or feed treated field.
- Aerial and ground application allowed.

Apply 1.0 to 1.25 pints per acre of Poast to actively growing tall fescue:
- After it has 4 to 6 inches of new growth
- Before the emergence of seedheads

For optimum control, DO NOT mow tall fescue for 30 days before or 14 days after treatment. For greater suppression, apply up to 2.5 pints per acre. NOTE: Because of environmental differences at the time of application, and the growth differences of tall fescue, control may exceed or fall short of that desired (e.g., applications made July 1 to mid-August may be less effective, especially if day temperatures reach 90° F).
**Tobacco**

**DO NOT** use on tobacco in California.

- **PHI** - 42 days
- **Maximum Single Application Rate** - 1.5 pints/acre
- **Maximum Seasonal Application Rate** - 4.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated field. **DO NOT** feed livestock anything from treated field.
- **Aerial and ground application allowed.**

To control crabgrass, shattercane, volunteer corn and all volunteer cereals, and witchgrass, add 2.5 pounds of AMS or 4.0 to 8.0 pints of UAN.

**Sequential Application**

- **Application 1** – Apply to plantbed seedlings up to 4 weeks before transplanting to the field.
  - **Maximum application rate** - 1.0 pint/acre
- **Application 2** – Apply up to 3 weeks after transplanting.
  - **Maximum application rate** - 1.5 pints/acre
- **Application 3** – Apply up to 7 weeks after transplanting.
  - **Maximum application rate** - 1.5 pints/acre

**NOTE:** Poast® herbicide may be applied at the seedbed stage of growth.

**Tomato**

- **PHI** - 20 days
- **Maximum Single Application Rate** - 1.5 pints/acre
- **Maximum Seasonal Application Rate** - 4.5 pints/acre
- **DO NOT** allow livestock to graze or feed treated field. **DO NOT** feed livestock anything from treated field.
  - **EXCEPTION:** Tomato waste may be fed to livestock.
- **Aerial and ground application allowed.**

**Tank Mix Specific Restrictions with Metribuzin-containing Products**

- In California, **DO NOT** tank mix Poast with metribuzin-containing products for application to tomato.
- **DO NOT** add AMS or UAN.
- **DO NOT** use on: Bermudagrass, itchgrass, quackgrass, red rice, rhizome Johnsongrass, shattercane, volunteer cereal or corn, or wirestem muhly.
- **DO NOT** treat transplanted tomatoes within 14 days of transplanting. Tomatoes must have recovered from transplant shock and new growth must be evident.
- **DO NOT** treat seeded tomatoes until plants have reached the 5 to 6 leaf stage.

**Tree Nuts**

**Poast** may be used in bearing and nonbearing tree nuts.

- **PHI** - 15 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 10.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated grove or orchard. **DO NOT** feed livestock anything from treated tree nut groves or orchards. **EXCEPTION:** In almond, only almond hulls may be fed to animals.
- **Ground application allowed.** **DO NOT** apply by air.

Tree nuts are very tolerant to Poast; application may be made over the top of small, nonbearing trees or as a directed spray on larger trees.

**Tuberous and Corm Vegetables**

[Arracacha; Arrowroot; Artichoke (Chinese and Jerusalem); Canna (Edible); Cassava (Bitter and Sweet); Chayote Root; Chufa; Dasheen (Taro); Ginger; Leren; Potato, Tanier; Turmeric; Yam Bean; Yam (True)]

- **PHI** - 30 days
- **Maximum Single Application Rate** - 2.5 pints/acre
- **Maximum Seasonal Application Rate** - 5.0 pints/acre
- **DO NOT** allow livestock to graze or feed treated field. **DO NOT** feed livestock anything from treated field.
- **Aerial and ground application allowed.**

**Wildlife Food Plots**

**Poast** can be used on all crops listed in this label for the purpose of establishing and maintaining wildlife food plots. Use the rate indicated for the crop and follow all associated restrictions and limitations, as detailed in this **Use-specific Information** section.
Conditions of Sale and Warranty

The Directions For Use of this product reflect the opinion of experts based on field use and tests. The directions are believed to be reliable and must be followed carefully. However, it is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or use of the product in a manner inconsistent with its labeling, all of which are beyond the control of BASF CORPORATION (“BASF”) or the Seller. To the extent consistent with applicable law, all such risks shall be assumed by the Buyer.

BASF warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes referred to in the Directions For Use, subject to the inherent risks, referred to above.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BASF MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS OR MERCHANTABILITY OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BUYER’S EXCLUSIVE REMEDY AND BASF’S EXCLUSIVE LIABILITY, WHETHER IN CONTRACT, TORT, NEGLIGENCE, STRICT LIABILITY, OR OTHERWISE, SHALL BE LIMITED TO REPAYMENT OF THE PURCHASE PRICE OF THE PRODUCT.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BASF AND THE SELLER DISCLAIM ANY LIABILITY FOR CONSEQUENTIAL, EXEMPLARY, SPECIAL OR INDIRECT DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT.

BASF and the Seller offer this product, and the Buyer and User accept it, subject to the foregoing Conditions of Sale and Warranty which may be varied only by agreement in writing signed by a duly authorized representative of BASF.

Poast is a registered trademark of BASF.
