DIRECTIONS FOR USE

SHAKE CONTAINER WELL, add **HEADSET**[®] to partially filled spray tank. Wash any residual **HEADSET** into spray tank with remaining water. All other spray materials should be added prior to **HEADSET**.

HEADSET may be applied “dilute” for conventional ground foliar applications (50 – 500 gallons of water per acre) or “concentrate” for ground low volume or aerial applications (2-20 gallons of water per acre).

In the case of very alkaline spray water (pH 7.5 to 8.0), it is strongly recommended to use an acidifying agent or buffering agent to lower the pH of the mixture down to 6.5 – 7.0.

INFORMATION

HEADSET is a liquid foliar formulation of primary and secondary nutrients. **HEADSET** aids in correcting primary nutrients and magnesium deficiencies on most susceptible crops.

HEADSET is manufactured specifically for use on cereal crops. Its use is suggested as part of a total nutrition program. Applications of **HEADSET** may be particularly beneficial during periods of peak nutrient demand.

COMPATIBILITY

HEADSET is compatible with most fungicides and insecticides, provided they are used in accordance with the registered label directions. Some compatibility problems may occur with alkaline mixtures (lime Sulphur) polyphosphates and with spreader stickers containing ethanol. When there is a question of compatibility prior to charging the spray tank, use the “jar compatibility test” in the following manner: Add 30 fl oz (20 parts) water to a glass jar with at least one quart capacity, then add 1.5 fl oz (1/3 part) of the products to be tank mixed. Shake well and allow to stand for at least 5 minutes. Observe to determine if any flocculation, precipitation, or unusual settling out occurs. If flocculation, precipitation, or other incompatible properties, etc. occur, do not tank mix **HEADSET** with this product. Select another product with suitable compatibility properties.
