Chaparral™

EPA Reg. No. 62719-597

2(ee) Recommendation†

For Distribution and Use Only in the State of Texas

This product bulletin expires December 31, 2020, and must not be used or distributed after this date.

Control of Susceptible Weeds Pre or Post Planting of Certain Annual and Perennial Grasses

ATTENTION

† This recommendation is permitted under FIFRA Section 2(ee) and has not been submitted to or approved by the EPA.

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- Read and follow all applicable directions for use, precautions, and limitations on the product label attached to the container for Chaparral™ herbicide.

Directions for Use

Chaparral controls susceptible broadleaf plants both pre and postemergence. See the Chaparral main label for a list of susceptible weeds.

PRECAUTIONS

Postemergence applications on newly emerged tall fescue, or newly emerged or established annual ryegrass, timothy, sorghum-sudangrass, teff, crabgrass, and pearl millet are not recommended. Unacceptable injury or death of these grasses may occur with Chaparral applications.

Pre-plant applications for control of susceptible emerged weeds

Apply Chaparral at a maximum of 2.0 oz/acre with a non-ionic surfactant to control susceptible weeds no sooner than 30 days prior to planting tall fescue, orchardgrass, timothy, and annual ryegrass. Chaparral can also be used at 2.0 oz/acre prior to planting sorghum-sudangrass, teff, crabgrass, and pearl millet, but a minimum 45-day-interval must be observed between the application and planting.

Post planting applications for control of susceptible emerged weeds

Apply Chaparral at a maximum of 2.0 oz/acre with a non-ionic surfactant to orchardgrass after seedling plants have at least begun tillering (multiple stems from single crown).
