Control of Grape Berry Moth in Grape

ATTENTION

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Intrepid[®] 2F insecticide before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Intrepid 2F according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Intrepid 2F.

Directions for Use

Refer to product label for General Use Precautions, Mixing and Application instructions.

Application Rates, Application Timing and Restrictions:

Application Rate (fl oz/acre)	Application Timing	Restrictions
8 - 16 (0.12 – 0.25 lb ai/acre)	For internal feeding lepidoptera larvae, apply at initiation of egg hatch for each generation. Reapply within 10 to 18 days to ensure complete coverage of rapidly expanding fruits or foliage.	 Preharvest Interval: Do not apply within 30 days of harvest. Do not apply more than 16 fl oz per acre per application or more than a total of 48 fl oz of Intrepid 2F (0.75 lb ai) per acre per year.

Please follow the use directions below for a reduced PHI for Grape to 21 days

Application Rate (fl oz/acre)	Application Timing	Restrictions
8 - 12 (0.12 – 0.19 lb ai/acre)	For internal feeding lepidoptera larvae, apply at initiation of egg hatch for each generation.	 Preharvest Interval: Do not apply within 21 days of harvest. Do not apply more than 12 floz per acre per application or more than a total of 48 floz of Intrepid 2F (0.75 lb ai) per acre per year. Do not make more than 4 applications per season. Do not reapply less than 21 days apart

Ground Application: Apply in a minimum of 40 gpa by conventional airblast or over the row sprayer. If using other type of sprayer, apply in sufficient carrier volume to ensure thorough, uniform cover of the crop. Use a spray volume that assures uniform coverage of the infested portions of the treated crop. Calibrate equipment to the desired spray volume.

Aerial Application: Apply in a minimum of 20 gpa. This method should not be used if the density of the foliage prohibits thorough, uniform coverage of the entire vine canopy.
