

2(ee) Recommendation

Use information in accordance with Section 2(ee) of FIFRA

DUPONT™ MATRIX® SG HERBICIDE

EPA REG. NO. 352-768

TANK MIX WITH "EPTAM 7E" IN POTATOES FOR USE IN THE STATES OF WASHINGTON, OREGON, IDAHO, AND CALIFORNIA

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by EPA.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Always read this FIFRA 2(ee) bulletin and the entire label on the product container before using this product.

MATRIX® SG herbicide tankmixed with "Eptam 7E" herbicide and applied postemergence may improve control of common lambsquarter in potatoes.

PRODUCT INFORMATION

MATRIX® SG herbicide is a soluble granule formulation that selectively controls certain broadleaf weeds and grasses in potatoes. The best control is obtained when MATRIX® SG is applied to young, actively growing weeds. The degree and duration of control may depend on the weed spectrum and infestation intensity, the weed size at application, and/or the environmental conditions at and following treatment. MATRIX® SG is noncorrosive to equipment, nonflammable, and nonvolatile.

POSTEMERGENCE APPLICATIONS

For postemergence applications, apply MATRIX® SG at 1 to 1.5 ounce per acre tankmixed with 2 pints of "Eptam 7E" herbicide to young, actively growing weeds after crop emergence, but before potatoes exceed 4-6" in height.

For best results with MATRIX® SG postemergence, rainfall or sprinkler irrigation of 1/3" to 1" (sandy soils apply at least 1/3", sandy loams apply at least 1/2", silt soils apply at least 3/4", clay soils apply at least 1"), no sooner than 4 hours, but not more than 5 days after application, will activate MATRIX® SG in the soil and help provide control of subsequent flushes of annual weeds.

Typically, small weeds (less than 1" in height or diameter) that are actively growing at application are most easily controlled. For best control of common lambsquarter height should not exceed 3". Postemergence applications can be made by ground or air.

Read and follow both product labels for these geographical areas.

Adjuvants:

For best results, include MSO and ammonium nitrogen fertilizer with broadcast tank-mix combinations of Eptam and MATRIX® SG.

Modified Seed Oil Adjuvants

- Methylated seed oil (MSO) or ethylated seed oil (ESO) are the preferred adjuvant.
- For best results, apply MSO at 1.0% volume/volume (1 gal per 100 gal spray solution), and ESO at 0.5% volume/volume.
- Oil adjuvants must contain at least 80% high quality, petroleum (mineral) or modified vegetable seed oil with at least 15% surfactant emulsifiers.

Ammonium Nitrogen Fertilizer

- An ammonium nitrogen fertilizer must be used in addition to the adjuvant. Use 2 lb/acre of a spray-grade ammonium sulfate (AMS).
