SABER HERBICIDE  
EPA Reg. No. 34704-803

## FOR WEED CONTROL IN FALLOW LAND AND CROP STUBBLE

07-14-2006 082006

---

### DIRECTIONS FOR USE

Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA-registered product label for SABER HERBICIDE, EPA Reg. No. 34704-803.

**This labeling must be in the possession of the user at the time of application.**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

**SABER** controls most broadleaf weeds and will control volunteer growth of annual broadleaf crops in fallow land or crop stubble. Crop stubble occurs in the field after harvest of crop. Fallow land or land idle between crops may be subject to unwanted plant growth. For control of many annual broadleaf species, apply SABER at the rate of 1½ to 4 pints per acre. To aid in suppressing certain perennial or biennial broadleaf weeds, SABER may be applied at the rate of 3 to 6 pints per acre either alone or in combination with other registered herbicides such as dicamba or picloram. Use the high rate on older plants, drought stressed plants or for hard to kill species such as Canada thistle and field bindweed.
