NUT AND STONE FRUIT CROPS – FOR INCREASING FRUIT AND NUT SET

CROP	OBJECTIVE / BENEFIT	APPLICATION TIMING / USE INSTRUCTIONS
Cherry	To increase fruit set.	Apply one pouch of <i>ReTain</i> per acre, as a single application during bloom. Applications between balloon stage to first bloom are more effective than earlier or later applications. Do not apply after petal fall.
IMPORTANT: <ul style="list-style-type: none">For sweet cherry, do not apply more than one pouch for increasing fruit set. Do not apply <i>ReTain</i> to sweet cherry trees when fruit are present.		
Water Volume: <i>ReTain</i> efficacy requires that flower buds and flowers receive thorough spray coverage. To ensure thorough coverage use calibrated spray equipment (i.e. air blast sprayer) and adjust water volumes based on tree size and spacing. Use sufficient water volume to achieve thorough coverage without excessive runoff. In most cases, a spray volume of 100 to 200 gallons per acre has been shown to be effective.		
Use of Adjuvants: Use of adjuvants with <i>ReTain</i> for bloom applications has not been fully researched. Some adjuvants will cause a bloom thinning effect and will reduce the benefits of <i>ReTain</i> .
