## Section 2(ee) Recommendation

Date: June 6, 2018

Product: Minecto® Pro, EPA Reg. No. 100-1592

Use: Suppression of spider mites in bulb onions

State: Oregon

### Directions for Use

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- The user must refer to the federally approved labels for the above noted product and read and follow all directions for use, restrictions, and precautions.
- The user should have this recommendation in its possession at the time of use.
- This recommendation for use of this product is permitted under Section 2(ee) of FIFRA and has not been submitted to or been approved by EPA.

Minecto Pro will provide suppression of spider mites when applied at 10 fl. oz/A. It is recommended to apply Minecto Pro when spider mites first appear.

- To avoid illegal residues, Minecto Pro **must** be mixed with a non-ionic activator type wetting, spreading and/or penetrating spray adjuvant. Do not use binder or sticker type adjuvants. (See **Section 4.4.5** of the Minecto Pro Section 3 label and see the **Use Restrictions** following the **Onion, Bulb Use Directions** section on the Section 3 label.)

Thorough coverage is essential to obtain the best results. Apply this product diluted in a minimum volume of 20 gal/A by ground or 5 gal/A by air. Under conditions such as high pest populations, dense foliage, or adverse application conditions (such as high temperatures), use a greater volume of water to ensure adequate coverage.

For best control of spider mites, apply with ground application equipment. With aerial application, spray coverage and the resulting level and duration of control of mites may be less than with ground application.
