

PRODUCT INFORMATION

NITROS is a concentrated biological inoculum formulated with broad spectrum, beneficial bacillus and Trichoderma fungi species. **NITROS** is known as a Plant Growth Promoting Rhizobacteria (PGPR). This inoculum provides more than traditional plant nutrient uptake by promoting healthy soil biofilm on strategic root and plant surfaces. These AGBIOFILM® layers become strategic exchanges for nutrient flow and relief of crop stress. Carbon flows efficiently back and forth through these layers carrying nutrient to the plant and sugars back to the microbes. This exchange is the key for effective yield increase **NITROS** is rich in food for microbes. **NITROS** is a liquid substrate to establish AGBIOFILM® ecosystems in the soil, on the leaf surface and the root rhizosphere. **NITROS** applications provide the best means to transport, propagate, and stabilize biological cultures on these AGBIOFILM® surfaces. **NITROS** may stimulate root development, increase plant vigor, yield and quality of produce.
