## Helping Nature Work<sup>SM</sup>

### Directions for Commercial Use:

Fertikin is intended for foliar use only. Foliar: Apply 1 to 4 quarts per acre (2.5 to 10 liters per hectare) with sufficient water for thorough coverage. Spray in early morning or late afternoon. Do not apply during the "sunlight" hours when air temperature is above 85° F/30° C. Foliar fertilization is intended to supplement standard ground fertility programs and will not by itself provide all nutrients normally required by agricultural crops. If you have any questions regarding mixing or application rates contact your Agro-K dealer before using this product.

### Derived from

Urea, Ammonium Hydroxide, Phosphoric Acid, Potassium Hydroxide  
Phosphorous Acid, Ascophyllum Nodosum

\*Phosphorous Acid products are for use as a supplemental fertilizer treatment. Upon foliar application, the phosphite ions are taken up directly by the plant foliage and may undergo a degree of conversion to phosphate ions, or be used directly by plants, as phosphite ions. As a soil application to annual crops, a lesser response from the initial crop, with a corresponding superior response from succeeding crops, may be observed. In addition, placement close to seeds or root zones may be injurious to crops. This effect may be aggravated by a soil pH below 6.5.
