DIRECTIONS FOR USE

FERTI-NEUTRAL ZINC 52 is recommended for aerial, concentrate, and dilute application to various field, vine and tree crops.

Actively growing plants with young leaves absorb foliarly-applied FERTI-NEUTRAL ZINC 52 most efficiently. Immediate post-irrigation or post-rainfall applications give best foliar uptake. Addition of urea (for example, 5 lbs. Lo-Bi Urea per 100 gal. of spray solution) will enhance foliar uptake of FERTI-NEUTRAL ZINC 52.

AVOID foliar applications of this product when plants are under moisture stress. Avoid foliar applications to deciduous tree crops during bloom.

CAUTION: Certain varieties of almonds, apricots, peaches, and plums are sensitive to foliar zinc applications. Test applications to part of several trees are advisable to assess the potential for undesirable effects under specific use conditions. Post-application rainfall may cause some shotholing of foliage, but usually will not damage the health of either trees or fruit.

COMPATIBILITY: This product is compatible with most pesticides and liquid fertilizers. A compatibility test is recommended if the desired combination has not previously been used, especially when tank mixing with phosphate-containing fertilizer solutions intended for applications to soil.

SPRAY VOLUME TERMINOLOGY
