

SP Bentgrass Formula® 28-8-18 with UMAXX water-soluble fertilizer dissolves easily in water, allowing nutrients to become plant-available through both leaves and roots. The N-P-K ratio is an excellent choice for low and high maintenance turf areas. **SP Bentgrass Formula** is compatible with most technical materials and can be applied through conventional spray equipment or through fertigation.

APPLICATION RECOMMENDATIONS:

General: Apply in solution at the rate of 1 pound in 5 to 20 gallons of water. Apply in early morning or late afternoon, avoiding periods of heavy direct sunlight. For best results, premix the required amount in water prior to adding to the spray tank or concentrate tank. This material dissolves faster in warm water. It gives off an endothermic reaction (turns icy cold) when it is being dissolved.

Sprayers: Use a sprayer with a boom, floodjet, handgun, or similar applicator. Calibrate sprayer to determine the area covered per tank. Determine amount of SP Bentgrass Formula Multiply total sprayer coverage by weight required. This determines the amount required per tank load. Example: If full sprayer tank will cover 11,000 square feet and you desire to apply ¼ of a pound N per 1,000 square feet, this would require 158.4 ounces (11 X 14.4 = 158.4 ounces or 9.9 pounds) per tank load.

Sprinkler and Irrigation-Proportioners: Weight per Area Method: Determine the coverage of the sprinkler system in square feet for the time it takes to empty the concentrate tank. Multiply this area (dividing by 1,000) by the ounces of fertilizer required to achieve the desired rate of N in the chart.

FOR FOLIAR APPLICATION ON TURF THE MAXIMUM SOLUBILITY IS 4 LBS. MATERIAL PER GALLON OF SPRAY SOLUTION.

NOTE: If you are applying 4 lbs. SP Bentgrass Formula with UMAXX per 1,000 square feet, you must use a minimum of 1 gallon of water. For best results, use 4 gallons per 1,000 square feet for better coverage.

Determine the amount of **SP Bentgrass Formula 28-8-18 with UMAXX** required based on the rate of nutrient per 1,000 ft² desired using the following chart:
