

Stop Blossom-End Rot of Tomatoes

Use 2 tablespoons (1 fl. oz.) per gallon of water.
Makes 16 gallons of spray.

Guaranteed Analysis:

Calcium as Ca.....	10.0%
Chlorine, not more than.....	22.0%
Derived from Calcium Chloride	

Blossom-end rot of tomatoes is a common problem encountered by the home gardener. It can be recognized by the dark grey black sunken area on the blossom-end (bottom) of the fruit. This area may be small or cover almost half the fruit. When large, the sunken area appears flat.

This problem is caused primarily by calcium deficiency in the fruit. In future crops it may be reduced by proper liming of the soil. But, on a crop already in progress, the plant must be supplied with calcium very rapidly to correct the problem. This can be done with SA-50 Brand Blossom-End Rot of Tomatoes.

Instructions: Apply SA-50 Brand Stop Blossom-End Rot of Tomatoes as a spray using 2 tablespoonfuls (1 fluid ounce) per gallon of water. Apply as a thorough cover spray to foliage and fruit. Use at weekly intervals for at least 3 sprays. This material may be added to regular sprays for insects and disease and is compatible with materials such as Malathion, Diazinon, Sevin, Dithane, and Neutral Copper. Do not use greater than the recommended rate or injury to the plant may result.

Statement of Practical Treatment

If Swallowed: Call a poison control center immediately. Induce vomiting by giving victim one or two glasses of water and touching back of throat with finger. Do not induce or give anything by mouth to an unconscious or convulsing person.

If in Eyes: Flush with water for 15 minutes. Consult a physician.

If on Skin: Flush skin with plenty of water. Remove contaminated clothing. Call a physician if irritation persists.

KEEP OUT OF REACH OF CHILDREN

CAUTION:

May be harmful if swallowed. Avoid contact with skin and eyes. Wash hands and face after use.

Buyer assumes all risks of use, storage, or handling of this material not in strict accordance with directions and precautions given herewith.
