GENERAL INFORMATION

Boron applied throughout the season in a program of multiple applications is essential for high yields.

CNI™ LIQUID BORON is an effective, readily available source of boron for soil and foliar applications to plants. It may be applied in water or mixed with most liquid fertilizer, micronutrient or pesticides.

WARNING: Over application or excessive use of boron or use on crops other than those listed can result in boron toxicity. This may cause foliar damage or serious crop injury.

The proper use of soil test recommendations will minimize the risk of over application of boron. Do not use **CNI™ LIQUID BORON** in soil applications where it will directly contact the seed. In foliar uses, use at least one (1) gallon water for each pint of **CNI™ LIQUID BORON** applied to the crop.

DIRECTION FOR USE

CNI™ LIQUID BORON is compatible with most liquid fertilizers, micronutrients and pesticides. Addition of **CNI™ LIQUID BORON** to these products should not be done without first testing compatibility on a small scale.

When mixing with pesticides, dilute with water prior to the addition of buggering agents and pesticides.

Follow all directions and precautions on pesticide labels prior to mixing with **CNI™ LIQUID BORON**. **FOLIAR APPLICATIONS:** Apply with enough carrier to thoroughly cover all foliage. Early morning or late evening applications give the best results. Boron is not easily translocated within the plant, therefore, multiple foliar applications at low rates during growing season are most effective.

SOIL APPLICATION: Apply with sufficient carrier to give complete coverage. Soil applied boron must be moved into the root zone to be absorbed by the plant. This can be accomplished by irrigation, rainfall or tillage.

DRIP IRRIGATION: The required amount of this product should be applied over the growing season with multiple applications 1-2 weeks apart.

AIR APPLICATION: Normal aerial application is 1 quart of this product per 5 gallons of water per acre per application.
