

Guaranteed analysis: 1-0-3

Total Nitrogen (N).....	1%
Water Soluble Organic Nitrogen (N) ..	1%
Soluble Potash (K ₂ O)	3%
Magnesium (Mg).....	0.5%

Derived from:

Molasses, seaweed extract,
concentrated sea water

Also contains non-plant food ingredient:

1.4% humic acid (derived from leonardite)

- 1 gallon (3.78L)
- 55 gallon (208.2L)
- 5 gallon (18.92L)
- 275 gallon (1041L)
- 30 gallon (113.56L)

Density: 10.5 lbs. per gallon at 68° F

Volume: 1 gallon (3.78L)

Rejuvenate™

This product is intended for use according to an approved organic system plan. All materials comply with the USDA National Organic Program (NOP) rules and other international bio-organic regulations for certified organic crop production. Verify with your certifier before using.

Application rates and timing

Rejuvenate is a blend of molasses and humic acid. It is used to promote microbiology, and to speed up decomposition of crop residue and improve soil tilth. This product is intended for soil applications and should only be used according to manufacturer's instructions.

Spray on cover crops before incorporation at a rate of 2 gallons per acre. Spray on crop residues at a rate of 3 gallons per acre as a supplement to a regular fertilizer program. For soil with little or no residue or cover at a rate of 6-8 quarts per acre. For heavier residue cover such as corn or beans, apply 2-3 gallons per acre. For soils low in microbial activity, add a biological inoculant. For fruit and vegetable production, rates may be increased to apply up to 5 gallons per acre.

Handling: Store in cool dry area out of direct sunlight. This product has been tested to store safely down to 35°F. Crystallization or sedimentation may occur below 35°F or above 95° F. Shake or stir before use, especially when near empty to dissolve the residue on the bottom of the drum/bottle. Do not pre-mix or store in diluted form. Always use product within 8 hours of diluting. All foliar sprays perform best when applied early morning or late afternoon.

When tank mixing: A jar test is recommended: Prepare a small amount of the proposed mix and allow it to stand in a glass jar over night observing for signs of incompatibility. Ideally, a sample of the test mix should then be sprayed on a small area of the target crop and observed for 3 to 4 days for any phytotoxic effects. Agitation is the key to usability of this product. AEA products involve tiny particles which are far too small to clog filters, however if they are inadequately diluted or agitated before and during application there is a possibility of problems with spray equipment. Consider using an eductor nozzle to agitate prior to use. Compatibility and/or performance cannot be guaranteed when combined with other products.

Disclaimer: AEA products are sold "as is" and all warranties, express or implied, are disclaimed. In no event shall AEA or its affiliates be liable for any damages of any kind for the storage or use of this product. The buyer assumes all responsibility for the use of any AEA products.
