MIXING INSTRUCTIONS AND APPLICATION RATES

SUPPRESS® Herbicide EC is a non-selective, post-emergent, foliar herbicide for use in and around all food and non-food crop areas. SUPPRESS® Herbicide EC works best on newly emerged weeds. For more mature weeds, use the higher application rates (6% to 9%) with up to 100 gallons of water per acre. For maximum weed control, apply SUPPRESS® Herbicide EC directly on the targeted weeds. SUPPRESS® Herbicide EC must be sprayed in a manner to avoid drift, such as applying with hooded spray equipment, to prevent drift damage to the crop.

APPLICATION RATES: Use the lower use rate range for young, succulent and actively growing weeds and the higher rate for weeds greater than six inches in height. Use the highest rate for perennial weeds when the plants have "hardened."

- Use a 3% solution for control of annual weeds.
- Use a 6% solution for burndown of perennial herbaceous plants, weeds in a later stage of growth and to control sucker growth.
- Use a 9% solution when maximum vegetative burndown, edging, or foliar trimming is desired. 7

^{*}Not for use in California.

Repeat applications as required to maintain desired level of weed control and to control plants emerging from seed and underground parts.

MIXING INSTRUCTIONS: Fill tank sprayer with half of the recommended water, then add the appropriate amount of **SUPPRESS® Herbicide EC**. Fill tank with the remaining amount of water. When spraying the solution, **use continuous agitation until all spray solution has been applied**. Apply spray solution in properly maintained and calibrated equipment capable of delivering the desired volumes. Apply spray solution as needed to control newly emerged weeds. Use spray solution within 4 hours of mixing.

SPRAY EQUIPMENT: Apply **SUPPRESS® Herbicide EC** using hand-held equipment, boom sprayers, pressure sprayers, and hose-end sprayers. Only protected handlers may be in the application area. Always clean application equipment thoroughly after each use.

Do not apply this product by aerial application. Do not apply when wind conditions favor movement of spray away from the site of application. When applying this product in a broadcast application, utilize a hooded sprayer, shielded or other spray equipment that prevents the movement of spray away from the target weeds. Utilize nozzles that are designed to produce large spray droplets to prevent drift onto crop.

DO NOT APPLY THIS PRODUCT THROUGH ANY TYPE OF IRRIGATION SYSTEM.

ADDITIONAL PRECAUTIONS: Do not apply to weeds when wet from dew, rain or water. Do not water within 2 hours after application. Do not apply if rainfall is expected within 2 hours of spray.

COMPATIBILITY: Conduct a compatibility test when you plan to mix **SUPPRESS® Herbicide EC** with other products. To determine the physical compatibility of **SUPPRESS® Herbicide EC** with other products, use a jar test. Using a quart jar, add the proportionate amounts of the products to approximately one quart of water with agitation. Add dry formulations first, then aqueous flowables, and then emulsifiable concentrates last. After thorough mixing, allow this mixture to stand for 5 minutes. If the combination does not form a precipitate and can be readily remixed, it is physically compatible. Once compatibility has been proven, use the same order of addition for adding products to the spray tank. Follow the more restrictive labeling requirements of any tank mix partner. Do not tank mix with products which prohibit tank mixing. Treat a small test plot if new combinations of products are being used for the first time
