DIRECTIONS FOR USE

1. Shake well or agitate prior to use.
2. Fill mix tank one-half to two-thirds full with water. Start and maintain constant agitation throughout entire mixing and treating process.
3. Add seed treatment materials in the following order:
 - A. WSP (water-soluble packets or wettable powders)
 - B. Dry Flowables
 - C. Liquid Flowables
 - D. Color Coat liquid colorant
 - E. Emulsifiable Concentrates
 - F. Soluble powders or liquids
4. Add recommended amount of Secure polymer
5. Bring the volume of slurry treatment mixture to the desired volume, with water.
6. To maintain a trouble-free application system, it is recommended that you back-flush your treating system at the end of each work day.

A jar test of all components in the slurry is strongly recommended to ensure compatibility and the correct order of product addition into the slurry prior to committing to a large mix batch. Always allow enough time between the addition of each component of a slurry mixture to ensure adequate suspension of the component prior to adding the next component.

USAGE RATES*	Secure RATE/100lbs. of seed
--------------	--------------------------------

Delinted COTTON	1.00 - 3.00 fl. oz.
CANOLA (treated)	0.50 - 1.00 fl. oz.
CANOLA (5% wt.gain)	2.00 fl.oz.**

*Suggested rates. Some variation may occur. Adjust the rates to obtain the desired color, and coverage due to the seed size, seed coat, conditioning equipment and total slurry.

**Rates may also vary depending on weight gain. Contact manufacturer for recommended rates and the other crops.
