

Brandt EDTA Magnesium

Chelated Trace Elements

General Recommendations

EDTA MAGNESIUM is intended for the prevention and/or correction of Magnesium deficiencies in all crops when determined by a soil test or plant tissue analysis. Because EDTA MAGNESIUM is fully chelated it is designed for mixing with liquid NPK starter fertilizers including those made with orthophosphate and/or containing pesticides.

Row or Band Application

Apply 3-5 pounds (1-2 quarts) EDTA MAGNESIUM per acre, just before or at planting time.

Broadcast Application

Apply 5-7 pounds (2-2.5 quarts) EDTA MAGNESIUM per acre, just before planting and work into the top 3-5 inches of soil.

Note: For foliar application, EDTA MAGNESIUM may be used at the rate of 2-4 pounds (1.5-3 pints) per acre with a minimum of 20 gallons of water. Or use BRANDT MANNI-PLEX MG for foliar applications.

Optimum rate of application will vary between fields, depending on soil pH and organic matter content. For best results, follow soil test or plant analysis recommendation.
