PHT Buffer is a spray adjuvant designed to improve the effectiveness of certain agricultural chemicals by reducing the pH of higher alkaline water. May be used with suitable wetting agents.

Compatibility: Use care when combining with copper fungicides since solubility of copper may be increased and cause plant injury. Do not combine with 2,4-D formulations, as a precipitate may form and herbicidal activity be reduced. If any question of compatibility arises, a small test batch should be made prior to full batch mixing.

Directions for Use

Use at the rate of 1 to 4 pints per 100 gallons of spray solution. Maximum amount to be used will depend on the pH of the water supply
