EYE:	Primary eye irritation (rabbit):	Irritation clearing in 48 hours.
SKIN:	Primary skin irritation (rabbit):	No irritation observed. Irritation Index = 0.0
	Dermal Sensitization (Albino guinea pig):	Negative; Not a dermal sensitizer.

INGESTION:	Acute Oral LD ₅₀ (Albino rat)	> 5.0 g/kg
INHALATION:	Acute Inhalation LC ₅₀ (rat)	> 5.40 mg/L Rats exposed for 4 hours to test atmosphere.

SUBCHRONIC:

DERMAL TOXICITY: 21-day repeated dose rabbit	Not established
INHALATION TOXICITY STUDY: 3 month rat	Not established

CHRONIC:

CARCINOGENICITY

None of the components present in this material at concentrations equal to or greater than 0.1% are listed by IARC, NTP, OSHA or ACGIH as being carcinogens.

Carcinogenicity/

Oncogenicity: Pyrethrins

Carcinogenicity/ Oncogenicity –Slightly elevated incidences of benign tumors of the thyroid and liver were seen in rats following lifetime administration of high doses of Pyrethrins. Further detailed scientific studies into the mode of action responsible for these effects show that:

- Because of biological species differences, the rat thyroid tumors are not relevant to humans;
- The rat liver tumors occur in animals *only* at doses greatly exceeding human exposure levels and that cause cell proliferation (mitogenesis).

Based on these data, the USEPA has classified Pyrethrins as “Not Likely to be Carcinogenic to Humans” at doses that do not cause a mitogenic response in the liver/cell proliferation.” Thus, Pyrethrins can be considered to be non-carcinogenic at exposure levels relevant to human use of Pyrethrins-containing products.

GENERAL COMMENTS:

Some or all of the toxicity data reported above was bridged from a substantially similar formula.
