

## 2(ee) Recommendation

Use information in accordance with Section 2(ee) of FIFRA

### DUPONT™ LANNATE® SP INSECTICIDE

EPA Reg. No. 352-342

### USE OF FOLIAR APPLICATION OF LANNATE® SP FOR CONTROL OF BAGRADA BUG IN BROCCOLI, CABBAGE, CAULIFLOWER, AND CHINESE CABBAGE IN THE STATES OF ARIZONA AND CALIFORNIA

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by EPA.

#### RESTRICTED USE PESTICIDE

#### DUE TO HIGH ACUTE TOXICITY TO HUMANS

For retail sale use only by Certified Applicators or persons under their direct supervision and  
Only for those covered by Certified Applicator's certification. Direct supervision for this  
product requires the certified applicator to review federal and supplemental label instructions  
with all personnel prior to application, mixing, loading or repair of application equipment.

#### DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

DuPont™ Lannate® SP can be applied by foliar application at 0.75 to 1 pound product per acre when bagrada bug populations reach locally determined economic threshold.

Consult your state cooperative extension service, professional consultants or other qualified authorities to determine appropriate action threshold levels for your area.

#### APPLICATION

Application can be made by ground or air application only. Application of DuPont™ Lannate® SP should be repeated as necessary to prevent reinfestation from adults migrating into the crop. For broccoli, cabbage and cauliflower the minimum application interval is 2 days and for Chinese cabbage the minimum application interval is 5 days. Use sufficient water to obtain thorough, uniform coverage. Since Lannate® is a fast acting contact insecticide, best results follow direct spraying of target insects. Bagrada bugs are very mobile pests. They may reinfest the treated area quickly.
