DIRECTIONS FOR USE

Follow all applicable directions, restrictions, Worker Protection Standard requirements and precautions on the EPA-registered Actigard label.

It is a violation of federal law to use this product in a manner inconsistent with its labeling. Persons using this product must comply with all applicable directions, restrictions, and precautions found on this labeling and that of the label of the federally registered product upon which this amendment is based.

This labeling must be in the possession of the user at the time of pesticide application.

USE DIRECTIONS FOR BASIL TRANSPLANTS GROWN IN ENCLOSED GREENHOUSES WITH PERMANENT FLOORING FOR RE-SALE TO CONSUMERS

Crop	Disease	Rate fl. oz./Acre (lb ai/A)	Remarks
Basil	Downy mildew <i>(Peronospora belbahrii)</i>	5.5 - 8.0 (0.09 - 0.13)	Apply no more than two applications containing Micora per crop. One application may be made during the plug growing stage and one application may be made during the crop finishing stage. Begin applications prior to disease development and continue on a 7-10 day interval. Make no more than 2 consecutive applications before switching to another effective non-Group 40 fungicide. Use the shorter interval and/or higher rates under high pressure or when conditions are conducive to disease. Micora may be tank mixed with another fungicide labeled for downy mildew that has a different mode of action. The addition of a spreading/penetrating type adjuvant such as a non-ionic based surfactant or crop oil concentrate or blend is recommended.
	Application: For best results, use sufficient water volume to provide thorough coverage. Micora may be applied by ground application or chemigation.		

Specific Use Restrictions:

- Do not apply more than 16 fl oz of product/A/crop (0.26 lb a.i./A/crop).
- Do not apply within 1 day of harvest (1-day PHI).
