

GreenSun® SP-225

RECOMMENDED FOR ALL CROPS - Season Long Source of S and P

GENERAL INFORMATION

GreenSun SP-225 is a product suited for conventional, organic and sustainable farming. GreenSun® SP-225 is manufactured to exacting standards to disperse thousands of sulfur and phosphate particles when it comes in contact with soil moisture. Gradual degradation of sulfur with thiobacillas bacteria in the soil results in availability over a period of time for plant uptake of sulfur and phosphate. GreenSun® SP-225 does not contain any bone meal phosphate.

OMRI
Listed

GreenSun® SP-225 is a pastille-shaped, degradable sulfur and phosphate product which is formulated using a new, patent pending technology as compared to other granular fertilizers. It is superior to other sulfur and phosphate materials in its handling and blending characteristics, contains very little dust, and has a very uniform granule size. GreenSun® SP-225 contains 22.5% phosphate rock, and when used in conjunction with a balanced fertility program, can provide a season-long source of plant available sulfur and phosphate. Phosphorus is required by plants to produce ATP for energy, and as a backbone for DNA and RNA. Sulfur is required by plants to build proteins, enzymes, vitamins, and is essential in metabolic reactions. GreenSun® SP-225 is recommended for all crops including, but not limited to: row crops, alfalfa, sugar cane, grapes, tree fruit, citrus and nut trees.

Season Long Source

GUARANTEED ANALYSIS:

Available Phosphate (P_2O_5)5.0%
Sulfur (S)65.0%
65% Free Sulfur (S)

Derived from: elemental sulfur and calcium phosphate.

GENERAL APPLICATION AND USE RECOMMENDATIONS

GreenSun® SP-225 provides agronomic and economic benefits in an easy to use pastille form. It can be blended with other granular or prilled fertilizers or applied alone. Proper timing, rate, and placement is important for desired results and highly dependent on stage of crop growth, soil fertility levels, and environmental conditions. GreenSun® SP-225 can be applied in a band or in furrow. Do not exceed 40 lbs/acre for in furrow seed applications. If GreenSun® SP-225 is not applied on a regular basis, or if soil sulfur levels are reported as deficient, then a soluble source of sulfur should be applied in conjunction with this product. Application rates vary from 10 to 50 lbs/acre as determined by crop and soil test levels.
