

Special Local Need

TRICOR DF 75% Dry Flowable Herbicide

EPA Reg. No. 70506-103

EPA SLN No. CA-080021

For use on Tomatoes

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF CALIFORNIA

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This label must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA-registered label.

Do not apply this product through any type of irrigation system.

Aerial application is prohibited.

Apply TRICOR DF as a ground application for chemical fallow on fields to be planted with tomatoes. Refer to the appropriate section of the EPA registered product label for additional information regarding spray equipment, mixing, sprayer cleanup, restrictions, container disposal and cautions.

WEEDS CONTROLLED: common chickweed, Lambsquarters, London rocket, Purslane, Redroot pigweed, Shepherds purse, Wild mustard.

APPLICATION INSTRUCTIONS	
DOSAGE TRICOR DF	2/3 to 1 lb
BROADCAST SPRAY: Use lower rate on soils with ½ to 2% organic matter and higher rates on soils with more than 2% organic matter. Apply specified dosage per acre by ground equipment using a minimum of 10 gallons of water per acre. One fallow application may be made up to 90 days prior to planting. At least 2 inches of rain or equivalent irrigation are required between application and planting. Additional cultivation may be required for weed control and seed bed preparation prior to planting.	

SPECIAL PRECAUTIONS:

Applications should not be made when weather conditions favor spray drift especially in areas where sensitive crops are growing in adjacent fields, or injury may occur. Light soils, alkaline soils or water, soil high in soluble salts, cold germination and/or growing conditions and interaction with other herbicides may harm tomatoes and require lower rates or longer preplant intervals.

Apply with properly calibrated equipment to assure uniform coverage of soil. Spray booms must be shut off while starting, turning, slowing or stopping, or crop injury may result. Do not overlap spray applications. Continuous agitation is required in the spray tank to keep material in suspension.

Avoid land-planing, leveling etc., between TRICOR DF application and planting as concentrating treated soil may cause injury.

Do not apply more than a total of 2/3 pound of TRICOR DF or 1 pint of METRI 4F as a broadcast or directed spray on established tomatoes following the application of TRICOR DF as a chemical fallow spray. Observe all precautions contained in the EPA registered label for use on tomatoes when making such applications.

DO NOT USE TRICOR DF ON TOMATOES IN KERN COUNTY, CALIFORNIA.
