

FIFRA SECTION 2(ee) RECOMMENDATION

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by the EPA.

Junction* Fungicide/Bactericide

EPA Reg. No. 67690-35

MOSS CONTROL ON TURF

DIRECTIONS FOR USE:

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Moss Control on Turf:

For established moss on golf greens, tees, and fairways, apply 4 ounces per 1000 square feet in 2 gallons of water. Sequential applications at 7 to 14 day intervals are required for maximum effectiveness. Use the shorter spray interval for maximum effectiveness. Five or more applications may be necessary for effective moss control. Applications should be made during cool weather conditions and not during the heat of the summer. If the product is applied at these rates to Bentgrass/*Poa annua* mixtures growing under stress from summer heat, mechanical, chemical or environmental damage, temporary tip burn or discoloration may occur. The user should test tank mixtures on a small area prior to wide scale use. Under certain circumstances, this product or tank mixtures containing this product may cause discoloration to some turfgrass species and varieties, including Bluegrass and Annual Bluegrass (*Poa annua*). If discoloration occurs, it is usually short term and normally mitigated by fertilizing and mowing.

For preventative control of moss on golf greens, tees, and fairways, apply 1 - 2 ounces per 1000 square feet in 2 gallons of water at 7-day intervals beginning in the early spring and continuing to early fall.

NOTE: All application directions, restrictions, worker protection standards, and precautions on the EPA registered label must be followed. This recommendation contains new or supplemental instructions for use of the product which may not appear on the package label. Follow instructions carefully. This recommendation and the federal label must be in the possession of the user at the time of the pesticide application.
