registration after September 30, 2020**

**FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL
MAY RESULT IN POOR PEST CONTROL, ILLEGAL RESIDUES AND/OR CROP INJURY.**

DIRECTIONS FOR USE

- It is a violation of federal law to use this product in a manner inconsistent with its labeling.
- This state-specific Section 24(c) labeling must be in the possession of the user at the time of application.
- Follow all applicable directions, restrictions, and precautions on the EPA-registered Subdue MAXX, EPA Reg No. 100-796 label.

Specific Use Directions

Plug Production*

Apply 3.75 oz/5000 sq. ft. (32.67 oz/A) of product as a soil surface spray to plug production trays after seeding and before seedling emergence in sufficient water to provide uniform coverage. Irrigate lightly after application to move the product into growing media profile, but not to the point of leaching. Make no more than one application during plug production phase. Follow the Subdue MAXX application with alternative chemistries on a weekly schedule implementing a preventative integrated disease management program.

Specific Use Restrictions:

1. Do not apply more than 27.8 fl. oz of product (2.0 lb. a.i) per acre per crop of soil-applied mefenoxam containing products.
2. Do not apply within 21 days of harvest (21-day PHI).

* Plug production refers to the production of a young plant grown from seed in a multi-celled germination tray for a short period of time. After growing to a desired size, the plug is then transplanted in a larger pot or container to grow to a larger size suitable to sell.
