

SUPPLEMENTAL LABEL

Expiration Date: 07/24/2018

EPA. REG. NO. 5905-542

FOR GRASS CONTROL IN SUGARCANE IN HAWAII ONLY

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

THIS LABELING MUST BE IN THE POSSESSION OF THE USER AT THE TIME OF APPLICATION. READ THE LABEL AFFIXED TO THE CONTAINER FOR UNISON BEFORE APPLYING.

USE OF UNISON ACCORDING TO THIS LABELING IS SUBJECT TO THE USE PRECAUTIONS AND LIMITATIONS IMPOSED BY THE LABEL AFFIXED TO THE CONTAINER FOR UNISON.

Crop-Specific Use Restrictions

Apply 2.15 to 6.45 pts UNISON per acre per application as required. Do not harvest cane prior to crop maturity. Do not apply more than 9.20 qts UNISON per acre (4 lbs. ae/acre) per year.

Preemergence: Limited to one application per crop cycle. Do not exceed a maximum of 4.6 qts UNISON per acre (2.0 lbs. ae/acre) per application.

Post emergence: Do not exceed a maximum of 4.6 qts UNISON per acre (2.0 lbs. ae/acre) per application. Layby applications may be made, but crop damage may occur in some sugarcane cultivars.

Do not apply this product in a manner that allows spray to drift from the application target site and/or harm to humans, animals or other non-target sites.

For the islands of Maui and Kauai, the general wind restriction is raised to 20 MPH. When applying in winds in excess of 15 MPH, the following requirements are in effect:

Aerial Applications: Aerial applicators must:

- No application shall be made within a distance of 1000 feet of sensitive areas such as Nature Preserves, Wildlife Refuges, Parks, Lakes, Reservoirs, Rivers, Streams, Non-irrigation Canals, Natural Ponds, Estuaries, Wetlands, Intertidal Areas, Ecologically Significant Grasslands, homes, public or private buildings, or fields with crops other than sugarcane whenever these sensitive areas are downwind from the spray areas and subject to possible spray drift. In instances where these sensitive areas are upwind from the spray area, the minimum restricted distance shall be 300 feet.
- Apply only as a coarse or coarser spray (ASAE standard 572 or a volume mean diameter of 385 microns).
- Use a spray drift retardant and/or other measures known to control drift.

Ground Broadcast Applications: For ground applications, applicators must:

- Apply by ground boom with nozzle height no more than 2 feet above ground (pre-emergence) or crop canopy (post emergent broadcast) applications or, for directed sprays, no more than 1 foot above the ground, or 1.25 ft (15 inches) for better spray patterns without boom levelers on uneven terrain.
- Apply only as a coarse or coarser spray (ASAE standard 572) or a volume mean diameter of 385 microns.
- Use spray drift retardants and/or other measures known to control drift.

Recommended application techniques to reduce off-site drift include, but are not limited to, the use of hooded or shielded sprayers or other means to reduce drift.
