Restrictions and Limitations (amended)

Rotational Crop Restrictions following Prowl H₂O Applications to Field and Row Crops when Prowl H₂O Application Rate is less than or equal to 4 pts/A (2.0 lbs ai/A), as follows:

For Wheat and Barley grown in Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, Oregon, Utah, Washington and Wyoming

Wheat and barley may be planted 4 months after an application of **Prowl H₂O** applied at rates less than or equal to 3.2 pts/A (1.52 lbs ai/A) with normal rainfall and/or irrigation. Following harvest of furrow-irrigated crops, thoroughly mix the soil by plowing or deep disking to minimize the potential for herbicide carryover to the following crop. For **Prowl H₂O** application rates greater than 3.2 pts/A but less than or equal to 4.0 pts/A, follow the wheat and barley crop rotation guidelines listed in **For Wheat and Barley grown in All Other States**.

For Wheat and Barley grown in All Other States

Wheat and barley may be planted 4 months after an application of **Prowl H₂O**, except under the following conditions:

If less than 12 inches of rainfall or overhead irrigation was received between application and rotational crop planting, wheat should not be planted before 12 months after a spring application of **Prowl H₂O** or 14 months after a fall application of **Prowl H₂O**.

In dryland areas and/or areas where irrigation is necessary to produce the crop treated with **Prowl H₂O**, **DO NOT** plant winter wheat or barley as a follow crop if crop failure/destruction occurs and land is fallowed during the summer.
