

Supplemental Labeling

PERMIT

Herbicide

EPA Reg. No. 81880-2-10163

Pre-Plant or At-Planting Burndown in Rice
For the control of annual broadleaf weeds and nutsedge.

ACTIVE INGREDIENT:	% BY WT.
* Halosulfuron-methyl	75.0%
OTHER INGREDIENTS	25.0%
TOTAL	100.0%

KEEP OUT OF REACH OF CHILDREN CAUTION

Read the entire label before using this product.

- This labeling must be in the possession of the user at the time of pesticide application.
- It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.
- All applicable directions, restrictions and precautions on the EPA registered label are to be followed.

Application of PERMIT Herbicide may be applied for burndown of emerged weeds before planting, or at planting of rice.

DIRECTIONS FOR USE

PERMIT Herbicide may be used as part of a pre-plant or at-planting burndown treatment, in combination with other suitable registered herbicides.

Read and follow all manufactures label instructions for the companion herbicide. If those instructions conflict with this label, do not tank mix the herbicide with PERMIT Herbicide. It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

In fields to be planted to rice, apply PERMIT Herbicide at 2/3 oz to 1 1/3 oz by weight per acre. Include a nonionic surfactant, petroleum based crop oil concentrate, or vegetable seed based product (methylated seed oils are considered a vegetable-seed oil-based product)

If another herbicide is tank mixed with PERMIT Herbicide to increase the broadleaf weed spectrum, select adjuvants based on the adjuvant limitation of the other companion herbicide.

SPRAY ADJUVANTS

Nonionic Surfactant (NIS)

Apply at a rate (concentration) of 0.25-.05% v/v (1-2 qt. per 100 gal spray solution). Use the higher rate in hot and dry conditions to enhance control.

Crop Oil Concentrate

Under dry conditions or during cool weather, a petroleum based crop oil concentrate, or vegetable-seed oil-based product may be used in place of a nonionic surfactant at 1-2 gal./100 gal of spray solution (1-2%v/v) to enhance weed control. Use a petroleum-based crop oil concentrate with at least 14% emulsifiers/surfactant and 80% oil.

Ammonium Nitrogen Fertilizer

An ammonium nitrogen fertilizer can be added to a surfactant or a crop oil concentrate to enhance control. Alternatively, a high quality, sprayable grade of ammonium sulfate (21-0-0) may be used.

IMPORTANT PRECAUTIONS

Under cool atmospheric conditions, deep water, deep planting and or weak seedlings, rice may appear to be stunted but normally recovers when growing conditions are favorable for normal growth and development. Under these adverse conditions the rice plant usually recovers resulting in no yield reduction. PERMIT Herbicide soil applications are safe to rice on soil pHs up to 8.0.

RESTRICTIONS

DO NOT allow drift to susceptible crops.

DO NOT make more than one pre-plant or at planting application of PERMIT Herbicide to rice per growing season.

DO NOT apply more than 1 1/3 oz per acre per crop cycle.

Read the "LIMIT OF WARRANTY AND LIABILITY" statement in the label booklet for PERMIT Herbicide before using. These terms apply to this SUPPLEMENTAL LABELING and if these terms are not acceptable, return the product unopened at once.
