

Section 2(ee) Recommendation

Date: December 23, 2003

Product: Rave™ Herbicide,
EPA Reg. No. 100-927

Use: Rave Tank Mix with Maverick™ Herbicide for use in wheat

States Idaho, Oregon, Washington

This FIFRA Section 2(ee) Recommendation recommends the use of Rave Herbicide in a tank mix with Maverick Herbicide for broad spectrum broadleaf weed control plus control of downy brome and cheat in winter wheat.

DIRECTIONS FOR USE

Rave Herbicide at 2 to 4 oz./a can be tank mixed with Maverick Herbicide at 2/3 ounce per acre. This recommendation is specifically for the control of mixed stands of broadleaf weeds that are on the Rave label and cheat and downy brome which are on the Maverick label. Do not apply this tank mix to weeds that are stressed or dormant, or when environmental conditions that stress weeds or cause weed dormancy are expected within one week after application. Environmental stress will result in reduced levels of weed control, especially of downy brome and cheat.

The user must refer to the federally approved Rave Herbicide label and read and follow all directions for use, restrictions, and precautions

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

This recommendation should be in the possession of the user at the time of pesticide application.

This recommendation is made as permitted by Section 2(ee) of FIFRA, as amended, and has not been submitted to or approved by the EPA.
