

Section 2(ee) Recommendation

Date: December 23, 2003

Product: Rave™ Herbicide
EPA Registration No. 100-927

Use: Green Foxtail (Pigeon Grass) Suppression in Wheat and Barley

States: Montana, North Dakota, South Dakota

This FIFRA Section 2(ee) recommendation is for the use of Rave Herbicide to suppress green foxtail in wheat and barley. “*Suppression*” is defined as a reduction of weed competition (vigor and/or population) compared to an untreated area. The degree of suppression is dependent on local environmental conditions, soil moisture, weed size, herbicide rate applied, etc.

DIRECTIONS FOR USE:

Apply Rave at 3.0 – 4.0 oz./acre to wheat or barley when Green foxtail is less than two inches tall and actively growing.

- Do not plant durum wheat less than 8 months after a Rave application.
- Before Rave is used in a tank mixture with other pesticides, test the mixture for physical compatibility.
- Refer to the label of the tank mix partner for additional weeds controlled and directions for use and observe all precautions and restrictions of the label of products used in the tank mixture.

The user must refer to the federally approved Rave Herbicide label and read and follow all applicable directions for use, restrictions, and precautions.

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

This recommendation should be in the possession of the user at the time of pesticide application.

This recommendation is made as permitted by Section 2(ee) of FIFRA, as amended, and has not been submitted to or approved by the EPA.
