

Section 2(ee) Recommendation

Date: December 19, 2003

Product: Fusion® Herbicide plus 2,4-D (LVE)
EPA Registration No. 100-1059

Use: For preplant control of fall panicum, giant foxtail and broadleaf weeds in double crop soybeans

States: Delaware, Maryland, Virginia

DIRECTIONS FOR USE

SOYBEANS: Apply Fusion Herbicide plus 2,4-D (LVE) tankmix combination as a preplant treatment for the control of fall panicum, giant foxtail and broadleaf weeds in double crop soybeans. Refer to the table below for use rates.

PRODUCT ¹	RATE	WEEDS CONTROLLED
Fusion	10-14 fl. oz. per acre	Fall Panicum ² and Giant Foxtail ³
2,4-D (LVE)	0.5 lb. AE per acre	Refer to the product label for weeds controlled

¹ Add crop oil concentrate at 1% v/v (1 pint per 25 gallons) of the finished spray volume

² Apply when fall panicum is 2-6 inches tall.

³ Apply when giant foxtail is 2-8 inches tall.

Application Recommendations (Ground):

Use flat fan nozzles. Use sufficient spray volume and pressure to ensure complete coverage of target weeds. Apply in 10 to 40 gallons per acre of spray mixture with spray pressure of 30-60 psi at the nozzle tip. When weed foliage is dense, use a minimum of 20 gallons per acre and a spray pressure of 60 psi.

The user must refer to the federally approved Fusion Herbicide plus 2,4-D (LVE) label and read and follow all applicable directions, restrictions, and precautions.

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

This recommendation should be in the possession of the user at the time of pesticide application.

This recommendation is made as permitted by FIFRA Section 2(ee) and, as amended, and has not been submitted to or approved by the EPA.
