Garlon[®] 4 Ultra

EPA Reg. No. 62719-527

2(ee) Recommendation[†]

For Distribution and Use in the State of Illinois

For the Control of Woody Plants in Rangeland and Permanent Grass Pastures, Non-Crop Areas such as Fence Rows, Non-Irrigation Ditchbanks, Roadsides, Around Farm Buildings, CRP Acres, and in Forests and Wildlife Openings. Use on these Sites May Include Application to Grazed Areas.

ATTENTION

[†] This recommendation is permitted under FIFRA 2(ee) and has not been submitted to or approved by the EPA.

- It as a violation of Federal law to use this product in a manner inconsistent with its labeling.
- Read and follow all applicable directions for use, precautions and limitations on the product label attached to the container for Garlon[®] 4 Ultra herbicide.

Garlon 4 Ultra can be used for cut surface and basal applications. See the main label for details on these types of applications. This product is also effective as a cut stump application.

Cut Stump Treatment

To control resprouting woody plant species such as maples and other susceptible species, apply a solution ranging from 20% diluted to undiluted Garlon 4 Ultra to wet the cambium and adjacent wood around the entire circumference of the cut stump. Treatments may be applied throughout the year including when snow is present; however, control may be reduced with treatment during periods of moisture stress as in late summer or in early spring when the sap is beginning to flow. Cut stumps so that they are approximately level in order to facilitate uniform coverage of Garlon 4 Ultra. The cambium area next to the bark is the most vital area to wet. Spray or paint the cut surfaces of freshly cut stumps and stubs using an applicator that can be calibrated to deliver the small amounts of material required.
