FIFRA Section 24(c) Special Local Need (SLN)

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF OREGON
For Control of Aphids in Clover Grown For Seed

Sivanto™prime

EPA Reg. No. 264-1141
SLN. No. OR-160008

THIS LABEL IS VALID UNTIL DECEMBER 31, 2021 UNLESS OTHERWISE AMENDED, WITHDRAWN, CANCELED, OR SUSPENDED.

ACTIVE INGREDIENT:
Flupyradifurone* ........................................................................................................................................................ 17.09%
OTHER INGREDIENTS: .............................................................................................................................................. 82.91%
TOTAL: ........................................................................................................................................................................ 100.00%

KEEP OUT OF REACH OF CHILDREN

CAUTION

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This label must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

ENVIRONMENTAL HAZARDS

Terrestrial Use
Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwater or rinsate.

Non-Target Organisms
This pesticide is toxic to aquatic invertebrates. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas.
Toxic to adult bees in laboratory studies via oral exposure, however, not toxic to bees through contact exposure, and field studies conducted with this product have shown no effects on honeybee colony development.

Ground Water Advisory
This chemical has properties and characteristics associated with chemicals detected in ground water. This chemical may leach into ground water if used in areas where soils are permeable, particularly where the water table is shallow.

Surface Water Label Advisories
Flupyradifurone and its degradate difluoroacetic acid may impact surface water quality due to runoff of rain water. This is especially true for poorly draining soils and soils with shallow ground water. Flupyradifurone and its degradate difluoroacetic acid are classified as having medium and high potential, respectively, for reaching surface water via run-off for several months or more after application. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of flupyradifurone and its degradate difluoroacetic acid from runoff water and sediment. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted to occur within 48 hours.

Endangered Species Advisory/Protection Requirements
This product may have effects on endangered species. When using this product, you must follow the measures contained in the Endangered Species Protection Bulletin for the county in which you are applying the product. To obtain Bulletins, no more than six months before using this product, consult http://www.epa.gov/espp/ or call 1-800-447-3813. You must use the Bulletin valid for the month in which you will apply the product.
GENERAL POLLINATOR BEST MANAGEMENT PRACTICE
In order to minimize exposure to pollinators, it is recommended that foliar insecticides are applied late in the afternoon, evening, or at night outside of daily peak foraging periods.

PRODUCT INFORMATION AND INSTRUCTIONS
SIVANTO prime:
- is a broad-spectrum insecticide, formulated in a 1.67 lb Al/gallon (200 grams Al/liter) SL (soluble liquid);
- belongs to a new class of chemicals known as the Butenolides;
- is acropetally systemic, moving from roots to the leaves in the case of soil applications;
- is translaminar through the leaf tissue and acropetally systemic, moving from points of contact to leaf tips in the case of foliar applications;
- can provide control of labeled pests on the underside of leaves; and
- is readily absorbed into leaf tissue and is considered “rainfast” within 1 hour after spray dries.

USE RESTRICTIONS
Do not tank mix with azole fungicides (FRAC group 3) during bloom period.

Foliar Application Restrictions:
- Pre-Harvest Interval (PHI): 14 days – Clover
- Minimum interval between applications: 10 days
- Minimum application volumes: 10 gallons/Acre (Ground); 2 gallons/Acre (Aerial)
- Maximum SIVANTO prime allowed per year: 28.0 fluid ounces/Acre (0.365 lb Al/Acre).

For MEDICAL And TRANSPORTATION Emergencies ONLY Call 24 Hours A Day 1-800-334-7577

For PRODUCT USE Information Call 1-866-99BAYER (1-866-992-2937)

As with any crop-protection product, always read and follow label directions.

For additional information call toll-free 1-866-99BAYER (1-866-992-2937).
